Please be advised that the Action Hero Main logic PCB is sensitive to the 5 Volt in-put it receives from the power supply. It is recommended that the 5 Volt line is properly adjusted to $5.0 \text{ V} + \text{ or } -0.1 \text{ V}$.

A 5V input that is too high or low may prohibit the game from booting-up or could cause the game to re-set. Please properly adjust the 5V before installing the main logic board.

Thank you for your attention to this matter.

Thank you for supporting I.C.E. products.

Sincerely,

The I.C.E. Service Department
