SPACE FURY OWNER'S MANUAL
Copyright - 1981 by SEGA/GREMLIN, ALL RIGHTS RESERVED
INTRODUCTION

Space Fury is an electronic game that makes extensive use of digital integrated circuitry and television monitor concepts. This manual is designed for the maintenance technician who possesses a general knowledge of solid state circuitry, microprocessor and digital integrated circuitry, and TV monitor concepts. Any individual not knowledgeable in these areas should not attempt repair of the electronic portion of the game.

Gremlin's new G-80 system will make troubleshooting easy. Each board has a separate function and most problems can immediately be isolated to a single board. The individual boards contain less circuitry than if they were combined on one or two boards. This results in faster and easier servicing. The new G-80 system gives Gremlin a lot more flexibility in designing new games. Increased ROM capability and the addition of speech means that new Gremlin games will be more exciting and even more profitable. If you have any questions not answered in this manual, call SEGA/Gremlin Customer Service, (800) 854-1098.
GAME SET-UP AND INSPECTION

Your Space Fury game is ready to play immediately upon arrival. But, before you plug in the game, open the rear access panel and make a general inspection of the interior game. The following items should be checked to insure no shipping damage has occurred.

1. **Inspection**
   a) Are the fuses intact?
      
      There are five fuses (not counting the monitor fuses which are detailed in the monitor manual accompanying this game).
      
      One fuse is located on the AC junction box. The other four are on the power supply PC board.
   
   b) Are the connectors firmly inserted?
      
      Proper connector fittings must be checked before game power is applied. Check all related connectors for good contact. Although disconnected connectors are easily spotted, poor contacts are difficult to locate. The connectors should therefore be pushed in firmly and then loosened to spot poor connections. When testing the PC board connectors, always turn off the power.
   
   c) Cabinet Inspection
      
      Inspect the cabinet interior and exterior to ensure that no damage has occurred during shipping. Check to ensure graphics are in place, monitor is not damaged and that the overall cabinet is in good condition.

2. **Voltage Selection**

   Before plugging in your game, make sure that the game voltage is correct for
your location. Locate the two leads from the AC junction box to the power
transformer. For 110 VAC, they should be connected to terminals 1 and 2
on the power transformer. For 100 VAC, connect 1 and 3, and for 220 VAC
applications, they should be connected to 1 and 4.

You will also notice on the AC junction box that there is a safety interlock
switch. When the rear panel is in place the switch is depressed and the game
receives power. Removing the rear panel, the switch returns to its original
position and the power is cut off from the game. For servicing, this switch
can be pulled out and power will be restored.

4. **Important Notes**

a) The following note is included in compliance with FCC rules:

**WARNING:** This equipment generates, uses, and can radiate radio frequency
energy and if not installed and used in accordance with the instruction
manual, may cause interference to radio communications. As temporarily
permitted by regulations, it has not been tested for compliance with the
limits for Class A computing devices pursuant to Subpart J of Part 15 FCC
Rules, which are designed to provide reasonable protection against
interference in which case the user at his own expense will be required
to take whatever measures may be required to correct the interference.
b) **Miscellaneous**

*Never* remove circuit board connections while power is on.

*Never* replace any components with anything other than exact replacement parts.

**DO NOT** replace fuses with anything other than the proper value. A blown fuse indicates an overload condition within the game. Replacing the fuse with a higher value can cause severe damage to internal components, if an overload occurs.

**Correspondence** regarding this game should be addressed to:

Game Concept

Space Fury is a one or two player game in which players try to destroy enemy fleets. There are four types of enemy ships consisting of scouts, cruisers, destroyers, and warships. After each round, players have the opportunity to dock with one of three mother ships. If a player is unsuccessful in docking no extra points are scored.

Docking Maneuver

Purple Ship- Firing power of three shots forward.

Green Ship- Firing power consists of one shot forward and one shot to each side.

Blue Ship- Firing power consists of one shot forward and two shots to the rear.

The first round of play consists of scouts, second round consists of cruisers, third round consists of destroyers, fourth round consists of warships, and the fifth round consists of the entire fleet. The player's ship can be destroyed by either a collision with an alien ship or by contact with a fireball shot by an alien. Only a completed ship can shoot fireballs. As you battle your way through each round, the Commander becomes more and more annoyed, if you are destroying his fleet successfully.

Game Action

Space Fury is equipped with a special thrust feature that thrusts your ship forward very quickly to avoid enemy fleets. When a player docks with one of three mother ships the player gets a three way shooter to make it easier to destroy enemy fleets. After the game is over the Commander rates your skills. Players are rated either easy, adequate, amusing, stimulating, or outstanding. In a two player game players alternate after the destruction of the first player's ship.

Scoring

Scouts are worth 10 points. When it is a completed ship you obtain 20 points. A partial ship is worth 40 points (shooting forward before it comes together).
Fireballs in the first round are worth 30 points. In the second round cruisers are worth 20 points. Each segment is worth 40 points for a completed ship and 80 points for a partial. Fireballs in the second round are worth 60 points. Destroyers in the third round are worth 30 points for a segment and 80 points for a completed ship, and 150 points for a partial ship. Fireballs in the third round are worth 100 points. Warships in the fourth round are worth 40 points for a segment, 150 points for a completed, and 300 points for a partial ship. Fireballs in the fourth round are worth 200 points. Fifth round scoring is the same as the fourth round. Bonus points are scored during the docking maneuver. The amount of points obtained depends on how long it takes a player to get through the round. The game ends when all player's ships are destroyed.
