## ADJUSTMENT PROCEDURE FOR SPACE RACE VIDEO GAME

This machine has been fully tested and adjusted prior to leaving the factory. It has been designed to be as maintenance-free as possible. An effort has been made to reduce the heat generated by the machine to increase the life-time of the components. The following adjustments can be made if the operator feels they are needed:

- 1) The contrast, brightness, volume, horizontal and vertical hold controls on the television set still operate as in a normal television set, and should be adjusted for minimum contrast.
- 2) Two potentiometers are provided on the circuit board to adjust the length of the game (R-38) and to adjust the fuel marker on the television screen (R27).
- 3) Trim pot R-38 should be adjusted for desired length of game between one to three minutes.
- 4) Trim pot R-27 should be adjusted until the fuel marker on the television screen is at its lowest level when the game ends.
- 5) The game can be set for either one or two plays per quarter by moving slide switch on circuit board to 1P or 2P.

The computer board is fully guaranteed for a period of one year after the date of purchase. Should any questions arise, contact your dealer or ATARI, INC., 14600 Winchester Blvd., Los Gatos, California, 95030. Telephone (408) 374-2440, Customer Service Department.
