Shunt for LM377, LM378

Shunt for LM379

Audio amplifiers are the subject this month as we continue our goal of Zero Downtime.

Audio Amps for TARG and SPECTAR

One of the most common problems on the TARG and SPECTAR audio boards is for your LM379 (or LM378) (or LM377) audio amp to function incorrectly. The audio amp is located at position 6A on the audio board with a heat sink mounted on top. If your video display is fine but you have very low volume, no volume, distorted sound, or screeching, you may be experiencing symptoms of a bad audio amp.

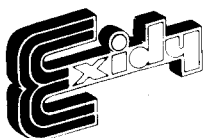

A LM377, or LM378 or a LM379 may be used if you match the correct dip shunt with the correct audio amp. The dip shunt is located

in a socket in position 6B on the audio board and determines the configuration needed for a specific audio amp. See illustration below.

You will notice that to change from one shunt configuration to the other all you have to do is remove the shunt, rotate it 180 degrees, and place it back into the dip shunt socket.

Until next month,

Terry Cunningham
Field Service Manager

CONVERSIONS OF EXIDY VIDEO GAMES

It has come to our attention that our games, specifically TARG™, have been and continue to be converted to SPECTAR™. As you are very well aware, there is a strong campaign afoot by many of us in the industry to protect our original products through enforcement of the United States Copyright Act. Both TARG™ and SPECTAR™ as original Exidy designed, developed, and manufactured games are protected by the Copyright Act.

This is Exidy's "fair warning" that willful copyright infringement is a federal crime.

It will be Exidy's official policy to remove all conversions, destroy all conversions, and return to the sender, freight collect, all

converted Exidy boards sent to us. Any alteration of our original game configuration voids Exidy's factory warranty and our responsibility to service that product.

Exidy expends considerable resources, time, money, and effort in innovating the best games for you to perpetuate our industry. All of our futures depend solely on companies such as Exidy that continue to innovate. We have a huge investment; so do you.
