

MONITOR KIT

A must for league and tournament play. Allows the growing number for spectators to watch matches without hassles. The large monitor with an amber display is attractively attached to the game in one of three positions. The Arachnid external monitor has the flexibility of being mounted to either side of the game or on top of any English Mark Darts 6300 or 7000 Series dart machine.

This monitor is easy to install with no RF modulator required. Also a black lower support assembly is included to give the dart machine additional support when the monitor is mounted into position.
