**WELLS-GARDNER ELECTRONICS
CORPORATION**

2701 NORTH KILDARE AVENUE
CHICAGO, ILLINOIS 60639

WARNINGS

1. Power Up Warning—

An isolation transformer must be used between the AC supply and the AC plug of the monitor before servicing or testing is performed since the chassis and the heat sink are directly connected to one side of the AC line which could present a shock hazard.

Before servicing is performed, read all the precautions labelled on the CRT and chassis.

2. **X-RAY RADIATION WARNING NOTICE**

WARNING: PARTS WHICH INFLUENCE X-RAY RADIATION IN HORIZONTAL DEFLECTION, HIGH VOLTAGE CIRCUITS AND PICTURE TUBE ETC. ARE INDICATED BY (★) IN THE PARTS LIST FOR REPLACEMENT PURPOSES. USE ONLY THE TYPE SHOWN IN THE PARTS LIST.

3. High Voltage—

This monitor contains HIGH VOLTAGES derived from power supplies capable of delivering LETHAL quantities of energy. Do not attempt to service until all precautions necessary for working on HIGH VOLTAGE equipment have been observed.

4. CRT Handling—

Care must be taken not to bump or scratch the picture tube as this may cause the picture tube to implode resulting in personal injury. Shatter proof goggles must be worn when handling the CRT. High voltage must be completely discharged before handling. Do not handle the CRT by the neck.

5. **PRODUCT SAFETY NOTICE**

WARNING: FOR CONTINUED SAFETY REPLACE SAFETY CRITICAL COMPONENTS ONLY WITH MANUFACTURER RECOMMENDED PARTS. THESE PARTS ARE IDENTIFIED BY SHADING AND BY (Δ) ON THE SCHEMATIC DIAGRAM.

AVERTISSEMENT: POUR MAINTENIR LE DEGRE DE SECURITE DE L'APPAREIL NE REMPLACER LES COMPOSANTS DONT LE FONCTIONNEMENT EST CRITIQUE POUR LA SECURITE QUE PAR DES PIECES RECOMMANDEES PAR LE FABRICANT.

For replacement purposes, use the same type or specified type of wire and cable, assuring the positioning of the wires is followed (especially for H.V. and power supply circuits). Use of alternative wiring or positioning could result in damage to the monitor or in a shock or fire hazard.

PERFORMANCE AND OPERATING DATA

1. Apply a suitable power source to the monitor through an isolation transformer.

2. Apply a suitable signal source to the monitor PCB by means of P205.

3. Set Up Controls.

All controls are preset at the factory, but may be adjusted to suit program material.

1.0 Supply

Voltage 108 VAC-132 VAC

Frequency 50 Hz-60 Hz

Note: Apply supply voltage through an isolation transformer with 1 Amp. minimum capability.

2.0 High Voltage (EHT)

For 19"V models 25.5 ± 0.8 K.V. at 0 Beam

Note: Condition for above 1 (beam) = 0
A.C. = 120V

3.0 Service Set-Up Controls

POWER PC BOARD

3.1 Voltage Adjustment, VR501 (Set for 127V DC)

VERT/HORIZ PC BOARD

3.2 Vertical Hold Control, VR301

3.3 Vertical Size Control, VR302

3.4 Horizontal Oscillator Coil, L351

3.5 Horizontal Hold Control, VR351

MAIN PC BOARD

3.6 Vertical Raster Position Adjustment, J604
(3 positions)

3.7 Horizontal Raster Position Adjustment, J608
(3 positions)

INTERFACE PC BOARD

3.8 Black Level Control, VR201

3.9 Horizontal Video Position Control, VR202

NECK PC BOARD

3.10 Video Drive Controls, Red VR401
Green VR402

3.11 CRT Cut Off Controls, Red VR403
Green VR404
Blue VR405

3.12 Screen Control, VR406

CHASSIS

3.13 Focus Control, VR702

3.14 Horizontal Width Coil, L702

SERVICE INSTRUCTIONS

NOTE: All monitors are equipped with automatic degaussing coils (L701) which demagnetize the picture tube every time the monitor is turned on after being off for a minimum of 5 minutes. Should any part of the chassis become magnetized it will be necessary to degauss the affected area with a manual degaussing coil. Move the coil slowly around the CRT face area then slowly withdraw for a distance of 6 feet before turning off.

1.0 +127V ADJUSTMENT (See Fig. 1)

The +127V adj. control (VR501) is adjusted at the factory. However, if readjustment should be required, proceed as follows.

- 1.1 Operate monitor for at least 15 minutes at 120V AC line.
- 1.2 Connect Positive lead of V.T.V.M. to blue lead of TR502 negative lead to chassis ground.
- 1.3 Adjust VR501 to obtain +127V reading.
- 1.4 After adjustment VR501 must be locked with a sealing varnish.

2.0 BLACK LEVEL CONTROL ADJUSTMENT

This control has been set at the factory and should not need further attention, however, when the game is connected a slight adjustment of VR201 may be necessary to obtain the proper black level (the black portion of the picture just extinguished).

3.0 VERTICAL SIZE (HEIGHT)

The vertical height control is a screw-driver adjustment. Location of this control is shown in Fig. 2. This control must be adjusted slowly, if necessary, until the picture or test pattern attains the correct vertical proportions.

4.0 CIRCUIT PROTECTION

A 3.0A pigtail fuse, mounted on the Main Board has been provided to protect the Power Output Circuit.

5.0 FOCUS

Adjust the Focus control (VR702), located on the HV unit (T701), for maximum over-all definition and fine picture detail.

6.0 HORIZONTAL OSC. ALIGNMENT (See Fig. 2)

A warm-up period of at least five minutes should be allowed before alignment is carried out. With the monitor being driven from the game signal, set VR351 to its mechanical center and short the lower end of R328 (TP32) to ground. Adjust L351 until picture stops sliding horizontally. Remove the short.

7.0 HORIZONTAL VIDEO POSITION

If the video is off center on the raster some compensation can be made by adjusting this control.

8.0 VERTICAL RASTER POSITION ADJUSTMENT

If the video is off center vertically, (short dimension of picture tube) some compensation can be made by moving J604 to either No.1 or No. 3 of P604. Position No. 1 moves raster up and position No.3 moves raster down.

9.0 HORIZONTAL RASTER POSITION ADJUSTMENT

If the video is off center horizontally (long dimension of picture tube) some compensation can be made by moving J608 to either No. 1 or No.3 of P608. Position No. 1 moves raster to the left and position No. 3 moves raster to the right.

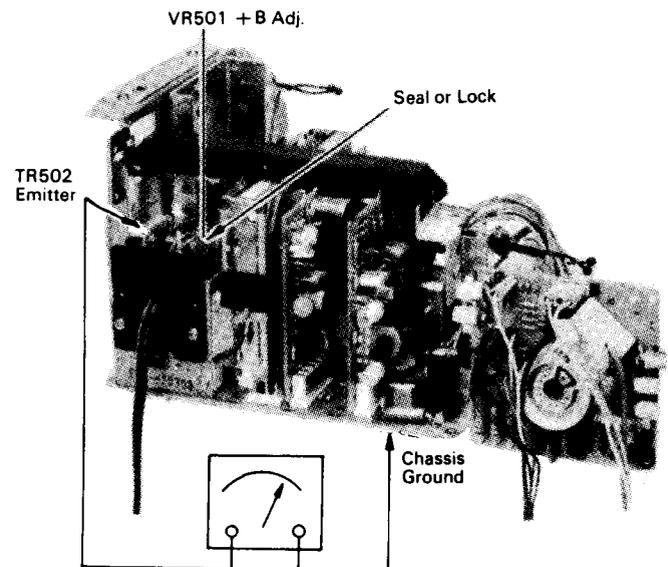

FIGURE 1

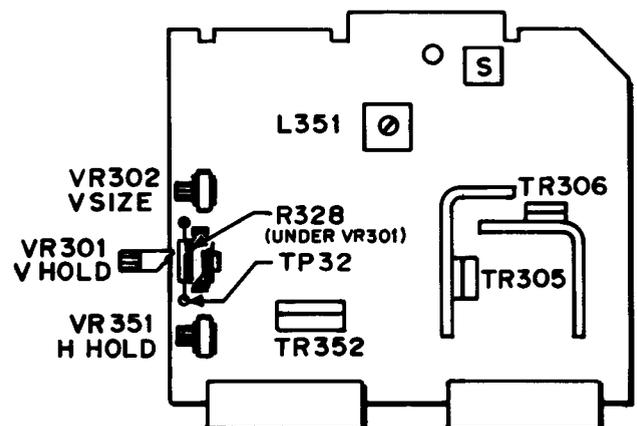

FIGURE 2

VERT./HORIZ. BOARD

INSTALLATION AND SERVICE INSTRUCTIONS

OUTLINE OF CONVERGENCE AND SET-UP PROCEDURE

- 1.0 Degaussing-Demagnetize shadow mask with external degaussing coil.
 - 2.0 Purity and Vertical Centering—Adjust purity magnet and yoke position.
 - 3.0 Static Convergence-Converge Red and Blue on Green in center of screen.
 - 4.0 Dynamic Convergence-Converge Red and Blue at edges of screen.
 - 5.0 White Balance-Set Gray and White brightness tracking.
- NOTE: Number 2.0 and 3.0 adjustments interact.

1.0 DEGAUSSING

The monitor is equipped with an automatic degaussing circuit. However, if the CRT shadow mask has become excessively magnetized, it may be necessary to degauss it with manual coil. Do not switch the coil OFF while the raster shows any effect from the coil.

2.0 COLOR PURITY AND VERTICAL CENTERING ADJUSTMENT

- 2.1 For best results, it is recommended that the purity adjustment be made in the final monitor location. If the monitor will be moved, perform this adjustment with it facing west or east. The monitor must have been operating 15 minutes prior to this procedure and the faceplate of the CRT must be at room temperature.
- 2.2 Set the converger assembly on the CRT neck with the center line (of the Purity Adjustment Magnet) over the gap between grids no. 3 & 4. (See Figure 3).
- 2.3 Make certain that the magnetic ring-pairs are in their correct positions before starting procedure. This produces a zero-correction state and helps facilitate adjustments.
- 2.4 Models which have vertical raster position adjustment, J604 must be in position #2 (center) of P604.
- 2.5 Remove R-G-B signal from monitor.
- 2.6 Turn Green Cut off Control (VR404) on the Neck Board fully CCW. (See Fig. 4)
- 2.7 Turn Red and Blue Cut off Control (VR405) fully CW.
- 2.8 Pull the Deflection Yoke backward so that the Magenta belt will appear. (See Fig. 5)
- 2.9 Move the two Purity Magnets and bring the Magenta belt to the mechanical center of the screen.
- 2.10 Push the Deflection Yoke forward gradually and fix it at the place where the Magenta screen becomes uniform throughout.
- 2.11 Turn Cut off Control, and Drive Control and confirm that each color is uniform.
- 2.12 If the color is not uniform, re-adjust it moving Purity Magnets slightly.
- 2.13 Move a pair of Purity Magnets at the same time (do not change the angle of the pair), and adjust the vert. center to center of screen.
- 2.14 Obtain the three colors and confirm whether white uniformity is balanced.
- 2.15 Insert the temporary wedge as shown in Fig. 5 and adjust the angle of Deflection Yoke.

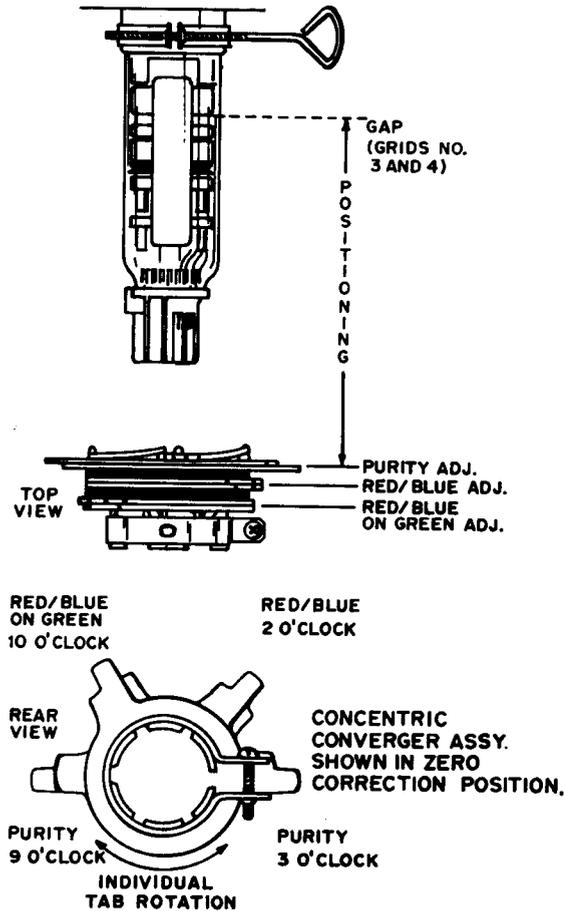

FIGURE 3

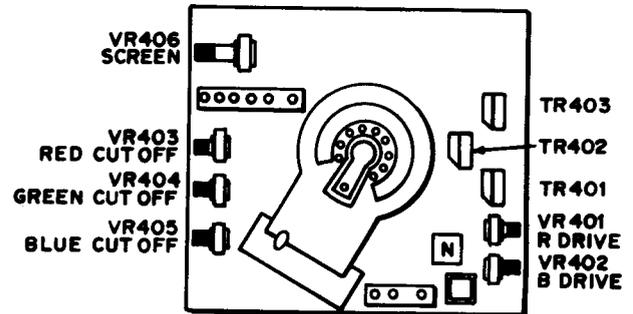

FIGURE 4

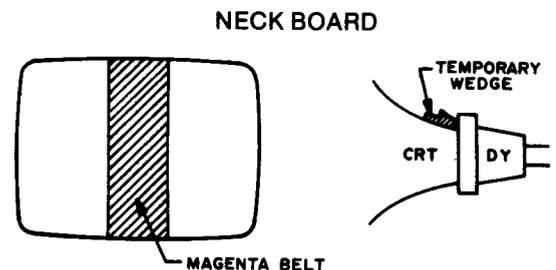

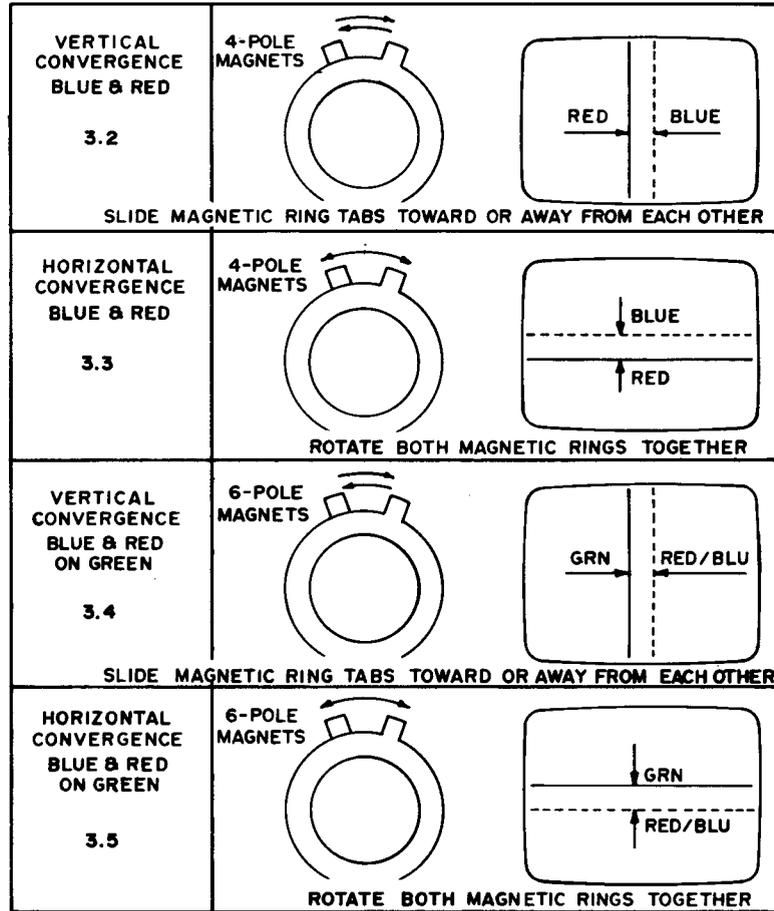

FIGURE 5

3.0 STATIC CONVERGENCE ADJUSTMENT

A recently developed Deflection Yoke and Electron Guns construction has been used on this equipment in combination with In-Line Guns and Black Stripe Screen to make a barrel-type magnetic field distribution for vertical deflection and a pin-cushion-type magnetic field for horizontal deflection with which a self-converging system can be obtained. This type is different from conventional unity-magnetic field distribution type deflection yoke. 4-Pole Magnets and 6-Pole Magnets are employed for static convergence instead of a Convergence Yoke.

- 3.1 A cross hatch signal should be connected to the monitor.
- 3.2 A pair of 4-Pole Convergence Magnets are provided and adjusted to converge the blue and red beams. When the Pole opens to the left and right 45° symmetrically, the magnetic field maximizes. Red and blue beams move to the left and right oppositely (See Fig. 6) Variation of the angle between the tabs adjusts the convergence of red and blue vertical lines.
- 3.3 When both 4-Pole Convergence Magnet Tabs are rotated as a pair, the convergence of the red and blue horizontal lines is adjusted.
- 3.4 A pair of 6-Pole Convergence Magnets are also provided and adjusted to converge the magenta (red + blue) to green beams. When the Pole opens to the left and right 30° symmetrically, the magnetic field is maximized. Red and blue beams both move to the left and right (See Fig. 6). Variation of the opening angle adjusts the convergence of magenta to green vertical lines.
- 3.5 When both 6-Pole Convergence Magnet Tabs are rotated as a pair the convergence of magenta to green horizontal lines is adjusted.

GREEN GUN IS THE CENTER GUN.
CONVERGE THE RED AND BLUE.
THEN CONVERGE RED AND BLUE ON GREEN.

REPEAT 3.2 & 3.3 IF ALL LINES ARE NOT CONVERGED AT CENTER

5827

FIGURE 6

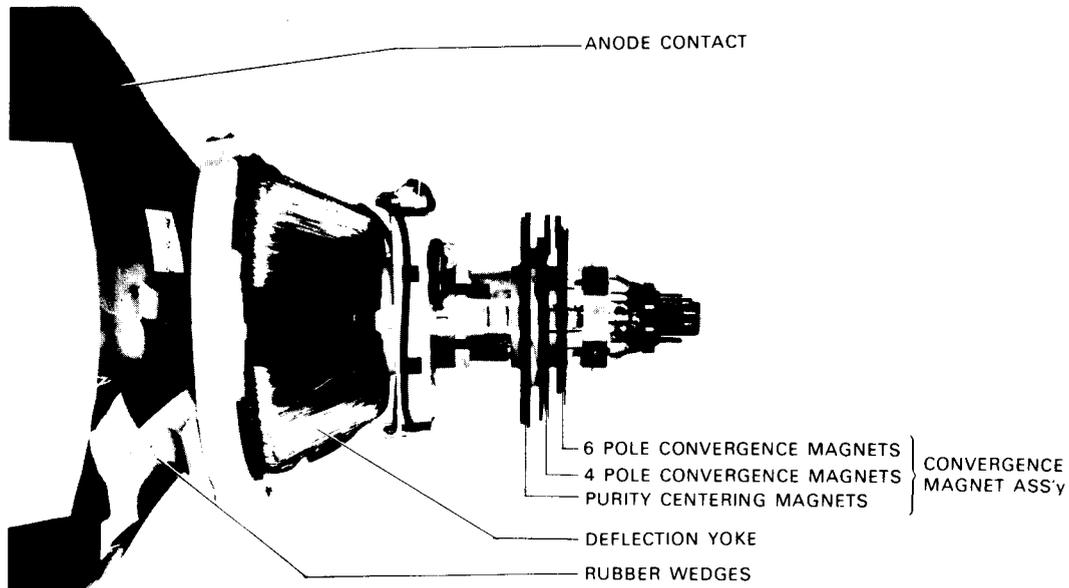

FIGURE 7

4.0 PRECISE ADJUSTMENT OF DYNAMIC CONVERGENCE (See Fig. 9 and 10)

- 4.1 Feed a cross hatch signal to the monitor.
- 4.2 Insert the temporary wedge and fix Deflection Yoke so as to obtain the best circumference convergence (See Fig. 9 and 10)

NOTE:

The temporary wedges may need to be moved during adjustments.

- 4.3 Insert three rubber wedges to the position as shown in Fig. 8 to obtain the best circumference convergence.

NOTE:

- 1) Tilting the angle of the yoke up and down adjusts the crossover of both vertical and horizontal red and blue lines. See Fig. 9 (a) and (b).
- 2) Tilting the angle of the yoke sideways adjusts the parallel convergence of both horizontal and vertical lines at the edges of the screen. See Fig. 10 (a) and (b).
- 3) Use three rubber wedges (thick and thin rubber wedges are used for a purpose).
- 4) The angle of each rubber wedge is shown in Fig. 8.
- 5) After three rubber wedges have been inserted, pull out the temporary wedge.
- 6) Fix the rubber wedges with chloroprene rubber adhesive.

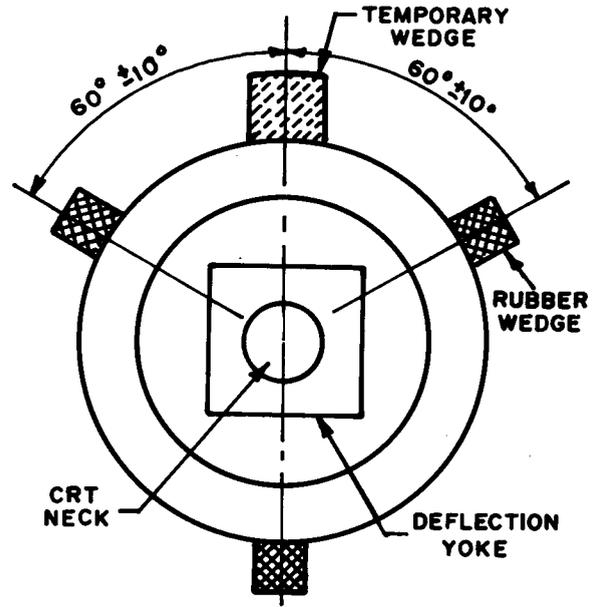

FIGURE 8

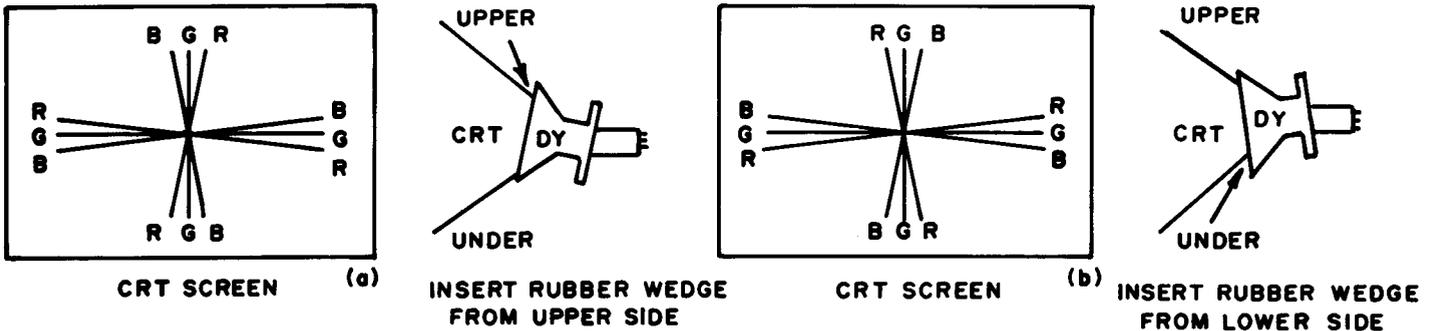

FIGURE 9

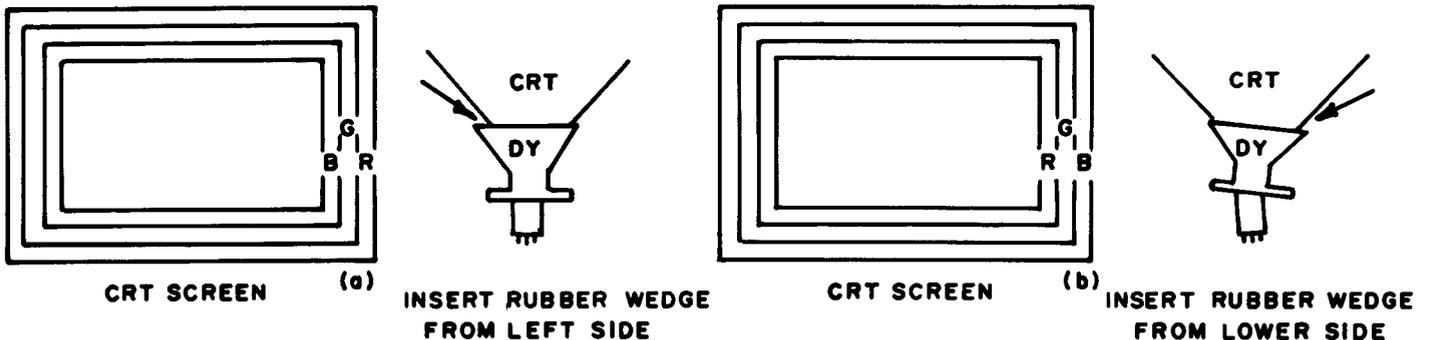

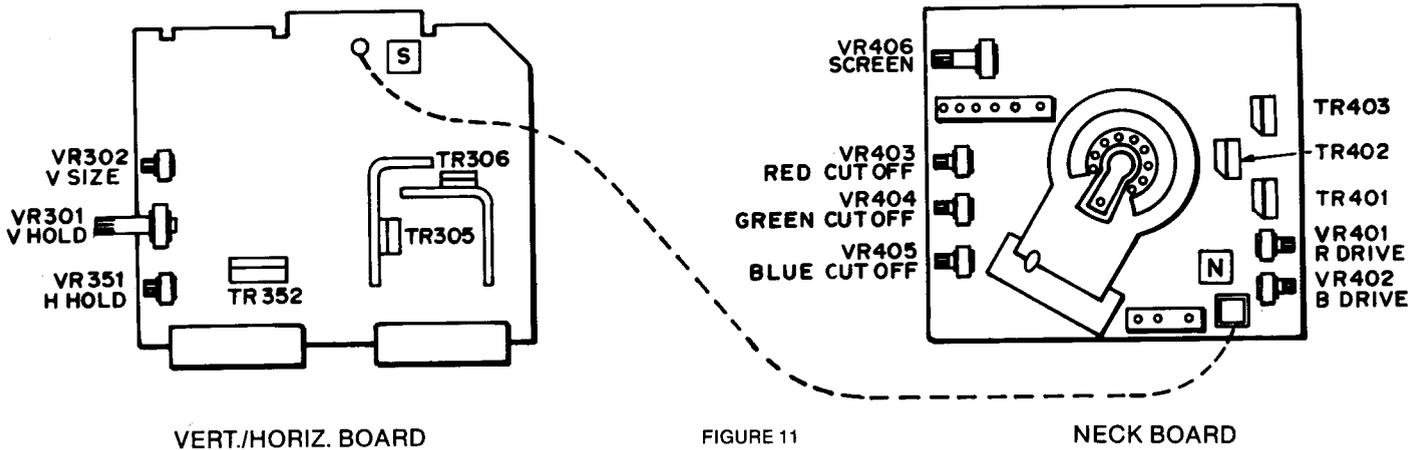

FIGURE 10

5.0 WHITE BALANCE

- 5.1 Refer to Fig. 11. and do the following in sub-dued light.
- 5.2 Ground the R/G/B inputs.
- 5.3 Set the R/B drive controls to their mechanical center.
- 5.4 Set the screen and R/G/B cutoff controls to minimum (fully CCW).
- 5.5 Insert service tip "N" on Neck PCB to "S" on Vert/ Horiz. PCB (see Fig. 11).
- 5.6 Slowly turn the screen control (CW) until the first faint line appears. Do not touch the associated cutoff control—it will stay fully CCW.
- 5.7 Slowly turn up the two remaining cutoff controls to match the first. This should result in a white line.
- 5.8 Replace the Service Tip "N" to the Neck PCB.
- 5.9 Adjust the Black Level Control for dim raster. Touch up the cutoff controls for best gray uniformity.
- 5.10 Adjust the Black Level Control for a bright White Raster, Adjust the R/B Drive Controls if necessary for best neutral white.
- 5.11 Repeat steps 5.9 and 5.10 until good tracking of white balance is achieved.

6.0 HIGH VOLTAGE PROTECT

- 6.1 The AUTO PROTECT circuit prevents the high voltage from reaching dangerous levels should a defect such as a short circuit occur between collector and emitter of the voltage regulator transistor.
- 6.2 When the + 127V DC exceeds approx. + 141V DC the horizontal oscillator is shut down.
- 6.3 When the defect is removed the oscillator will not restart until the power is removed momentarily.

DES PIECES RECOMMANDEES PAR LE
FABRICANT.

OSCILLOSCOPE WAVEFORM PATTERN

The waveforms shown are as observed on the wide band
oscilloscope with the monitor turned to a reasonably
strong signal and a normal picture. The voltages shown
on each waveform are the approximate peak ampli-
tudes. The frequency accompanying each waveform in-
dicates the repetition rate of waveform not the sweep
rate of the oscilloscope.

If the waveforms are observed on the oscilloscope with
a poor high frequency response, the corner of the
pulses will tend to be more rounded than those shown
and the amplitude of any high frequency pulse will
tend to be less.

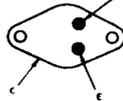

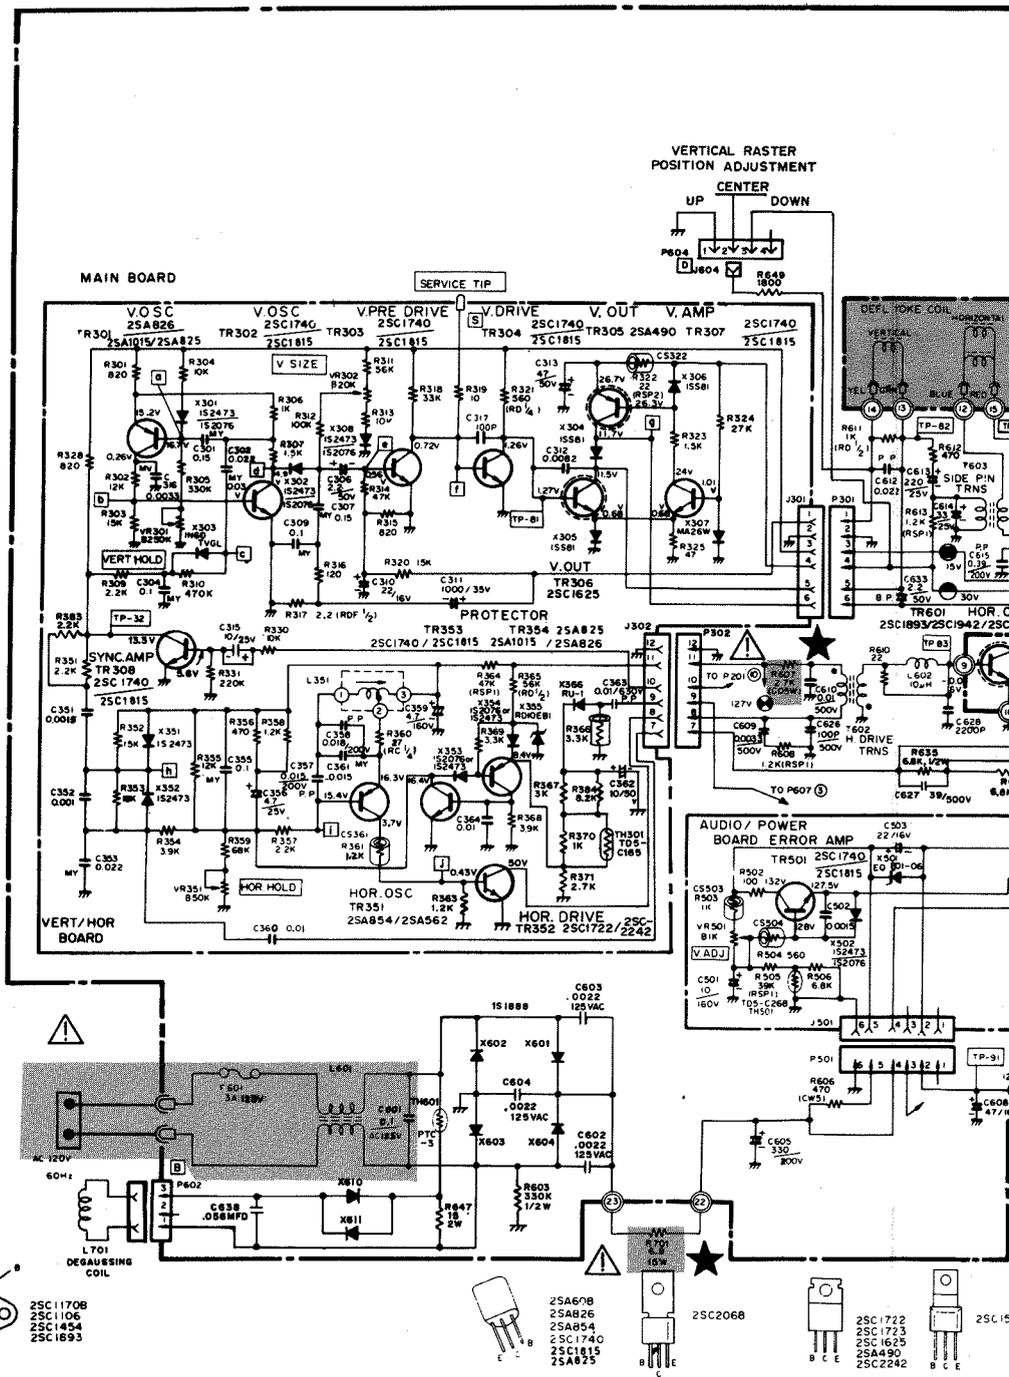

Power Supply Voltage and Symbols

Symbols	Line Voltage	Working Circuit
	15V	Vert. — Drive stage ABL — Bias CRT Cut-Off
	30V	Vert Output Side pin Trans. — Bias
	127V	Horiz. Osc. Horiz. Drive Horiz. Output
	160V	Video Output
	890V	Screen-Bias

SERVICE TECHNICIAN WARNING
X-RAY RADIATION PRECAUTION

THIS PRODUCT CONTAINS COMPONENTS WHICH ARE ESSENTIAL FOR X-RAY RADIATION PROTECTION. FOR REPLACEMENT PURPOSES, ONLY TYPE PARTS SHOWN IN THIS PARTS LIST.
