

Operation, Maintenance  
and Service Manual

# CENTIPEDE™

**Cocktail**

Complete with Illustrated Parts Lists

## GAME SERIAL NUMBER LOCATION

Your game's serial number is stamped on a silver identification label, located on the outside of the game. The same number is also stamped on the chassis of the monitor, Regulator/Audio II PCB, the power supply, and Centipede™ Game PCB. Please mention this number whenever calling your distributor for service.

# CENTIPEDE™

## Notice Regarding Non-Atari Parts

Atari, Inc.'s warranty (printed on the inside back cover of this manual) may be voided, if you do any of the following:

- 1.) you substitute non-Atari parts in your coin-operated game, or
- 2.) you modify or alter any circuits in your Atari game by using kits or parts **not** supplied by Atari.

Not only may the use of any non-Atari parts void your warranty, but any such alteration may also adversely affect the safety of your game, and may cause injury to you and your players.

# Set-Up Procedures

## A. New Features

The Centipede™ game has four new features. Even if you are familiar with Atari games, you should note these important differences. The new features are:

- **Mini-Trak Ball™.** The widely used Trak Ball assembly has been redesigned. The basis for this compact, simplified design is a two-part molded plastic frame. Fewer parts in this control make servicing easier, and its very smooth action is designed for greater player accuracy.
- The circuitry has **non-volatile memory** for part of the high score table. This means that even if power is removed from the game, the three highest scores will permanently stay in memory. To erase these scores follow the instructions in Figure 7, Self-Test Procedure.

- The **new style cocktail-table cabinet** contains a CSA-approved 14-inch color raster-scan monitor and provides a new location for the game printed-circuit boards (PCBs). The table top is end-hinged for easy access to the PCBs and control panels. The coin box is accessible only from the outside of the cabinet.
- The newly-designed **adjustable table legs** provide improved cabinet stability while allowing two cocktail-table height settings: 27 $\frac{7}{8}$  and 30 inches. A third "upright" setting is 39 $\frac{3}{4}$  inches high, and allows the game to be placed in locations with other upright games.

These new parts, as well as all other major parts in the game, are illustrated in Figure 1. Throughout this manual, wherever one of these new parts is mentioned, you will see this symbol:

Figure 1 Overview of Game

⚠ — **WARNING:** — ⚠  
**SHOCK HAZARD**

Connect this game only to a grounded 3-wire outlet. If you have only a 2-wire outlet, we recommend you hire a licensed electrician to install a grounded outlet. **Players may receive an electric shock** if this game is not properly grounded!

## B. Opening the Game Cabinet

### 1. Opening the Table Top

- To open the game cabinet, unlock and open the two locks at one end of the game, located immediately below the table top (see Figure 1).
- Carefully lift the table top until the support arm locks into place. **Do not jam the table top at the end of its upward swing.**

### 2. Access Panel

- To open the access panel, lift up the steel security bar inside the cabinet wall.
- The access panel near the bottom of the cabinet will then come out. This small panel was designed with a bar instead of the usual lock to reduce the number of keys required for this game.

### 3. Closing the Table Top

- To close the cabinet, stand on the start-switch side of the cabinet and grasp the table top with your right hand.
- With your left hand, press the button at the middle of the support arm and push the support arm down towards the right.
- **Gently** lower the table top to the closed position.
- Lock the two latches on the left end of the cabinet, located just underneath the table top.

## C. Game Inspection

This new game is ready to play upon removal from the shipping carton. However, your careful inspection is needed to supply the final touch of quality

control. Please follow these steps to help us insure that your new game was delivered to you in good condition.

— **NOTE** —

Do not plug the game in yet!

1. Examine the exterior of the game cabinet for dents, chips, or broken parts.
2. Unlock the table top and open the access panel of the cabinet; inspect the interior of the game as follows:
  - Check that all plug-in connectors (on the game harness) are firmly seated. Replug any connectors found unplugged. **Don't force connectors together.** The connectors are keyed so they only go on in the proper orientation. **A reversed edge connector will damage a PCB** and will void your warranty.
  - Check that all plug-in integrated circuits on the game PCB are firmly seated in their sockets.

⚠ — **WARNING** — ⚠

To avoid possible unpleasant electrical shock, do not touch internal parts of the monitor with your hands or with metal objects held in your hands!

- Note the location of the game's serial number—it is printed on the special label on the outside of the game cabinet. Verify that the serial numbers also stamped on the Centipede™ Game PCB, Regulator/Audio II PCB, power supply, and monitor are all identical. A drawing of the serial-numbered components is on the inside front cover of this manual. Please mention this number whenever you call your distributor for service.
- Check all major subassemblies such as the power supply, control panel and monitor for secure mounting.

# D. Game Installation

## Figure 2 Installation Requirements

Power	135 watts
Temperature	0 to 38°C (32 to 100°F)
Humidity	Not over 95% relative
Space Required	62¼ × 82½ cm (24½ × 32½ in.)
Game Height	65 to 101 cm (25¾ to 39¾ in.)

### 1. Voltage Selection

This power supply has four colored voltage-selection plugs and operates on the line voltage of almost any country in the world.

Before plugging in your game, check your power supply. Make sure that the voltage selection plug on it is correct for your location's line voltage. Check the wire color on the plug and see if it is correct per Figure 3.

### 2. Interlock and Power On/Off Switches

To minimize the hazard of electrical shock while working on the inside of the game cabinet, an interlock switch has been installed under the table top (see Figure 4). This switch removes all AC line power from the game circuitry when the table top is opened.

Check for proper operation of the interlock switch by performing the following steps:

- Be sure the table top is closed.
- Plug the AC line power cord into an AC outlet.
- Set the power on/off switch to the "on" position. Within 30 seconds the monitor should display a picture.
- Slowly open the table top. The monitor picture should disappear when the top is lifted approximately 2½ cm (1 inch).
- If the results of the preceding step are satisfactory, the interlock switch is operating properly. If the monitor doesn't go off as described, check to see if the interlock switch is broken from its mounting or stuck in the "on" position.

**⚠ WARNING ⚠**

Fuse cover must be in place during game operation.

Line Voltage Range	Voltage Selection Plug Color
90-110 VAC (100)	Violet
105-135 VAC (120)	Yellow
200-240 VAC (220)	Blue
220-260 VAC (240)	Brown

Figure 3 Voltage Plug Selection

**Figure 4 Interlock and Power On/Off Switches**

- Remove or empty the coin box. Loose coins may slide out of the coin box and into the game cabinet.
- Lay the table on its side. Place a support (the coin box, books or tool box) under the recessed side of the cabinet.
- Loosen the two Allen-head screws on each leg. Grasp the legs and slide them into the desired position. Then tighten the screws.

Figure 5 Adjusting the Table Legs

## E. Adjusting the Table Legs

This cocktail-table game is designed for four adjustable heights—65, 70, 76 or 101 cm (25 3/4, 27 7/8, 30 or 39 3/4 inches). To adjust the table height, refer to Figure 5.

### NOTE

To ensure cabinet strength, you **must** use two screws when attaching each table leg. Using only one screw may result in damage to the cabinet wall when you move the cabinet across the floor.

## F. Self-Test Procedure

This game will test itself and provide data to demonstrate that the game's circuitry and controls are operating properly. The data is provided on the monitor, light-emitting-diode start switches, and game speaker; no additional equipment is necessary.

Part of the self-test procedure includes a display of the operator-selectable game options. Therefore, we suggest you run the self-test procedure anytime you need to change the game's options.

The locations of the self-test and option switches are shown in Figure 6.

To run the self-test, follow the instructions outlined in Figure 7.

**Figure 6 Location of Self-Test Switch, Volume Control and Option Switches**

## Figure 7 Self-Test Procedure

Instruction	Results if Test Passes (if results are <i>not</i> as indicated, see list of failures that follows)
<b>1. Begin:</b> Set self-test switch to <b>on</b> position (see Figure 6).	The monitor displays the picture below. The game produces no sound at all. The two start-switch LEDs will stay on throughout self-test.
<b>2. Mini-Trak Ball Test:</b> Roll the Mini-Trak Ball controls in all directions.	The centipede head moves around on the screen in directions corresponding to Mini-Trak Ball control.
<b>3. Switch Test:</b> One after another, activate and release all control-panel switches, the slam switch, and coin switches.*	As long as you activate (close) each switch, you'll hear a high beep.
<b>4. Audio I/O Chip Test:</b> One after another, press and hold 2 of the control-panel switches and at least one of the coin switches.	Volume increases and pitch decreases with each additional switch that is activated.
<b>5. Audio I/O Channel Test:</b> Press 1-player start button four times.	You'll hear a high beep for each press of the button.
<b>6. Background Color Test:</b> Press 1-player start button at least 16 times.	Background color changes with each press of the 1-player start button.
<b>7. Object Color Test:</b> Press 2-player start button at least 16 times.	Objects on playfield change color.
<b>8. Moving Object Test:</b> Watch the screen, and move the Mini-Trak Ball around. Place the moving object in an open area of the screen. Press fire button several times.	Each press of the fire button changes the moving object to another moving object. At certain points in the series, the object will disappear. This is <b>not</b> a failure indication.
<b>9. Erasing the High Score Table (optional)</b> The current three highest scores are held in permanent memory, even if the game is unplugged. If you want to erase these scores, simultaneously press either fire and both start buttons. The <b>4 FF</b> message in the upper left corner of the screen will then be displayed. The average game time data will also be erased, but still displayed on the screen.	
<b>10. End:</b> When satisfied with test, set self-test switch to <b>off</b> position.	

\* Activate coin switches by inserting at least one coin in each coin slot. You will not trip the coin counters as long as you stay in self-test.

## Figure 7 Self-Test Procedure, continued

### Results if Test Fails

#### 1. Begin:

*RAM FAILURE* is indicated by one to 10 beeps. Note the number of beeps and determine which RAM may be bad. To restart the test, press the reset pushbutton on the game PCB, or set the self-test switch to off, then again to the on position.

Number of Beeps Given	Possible Bad RAM Chip Location
1	H2
2	F2
3	K7
4	K5
5	L7
6	L5
7	M7
8	M5
9	N7
10	N5

Any bad RAM must be replaced before the computer can check the other RAMs, as well as continue with the self-test.

*ROM/PROM FAILURE* is indicated by two groups of numbers in the upper left corner of the screen. The number at the far left indicates the location of the failing PROM/ROM(s). Identify the bad ROM/PROM with the table below. If the screen displays "garbage," or the logic produces strange audio or randomly activates the coin counters, the chip at location J1 is probably bad.

Ignore the hexadecimal numbers just to the right of the chip-location number.

Displayed Number	Failing ROM/PROM Chip Location
0	D1
1	E1
2	F/H1
3 or "garbage"	J1
4*	E5*
5	B/C/D3

\*If you replace or erase this ROM, the number 4 FF will be displayed throughout the self-test. The next time you enter self-test, the 4 disappears after a game is played. Otherwise the self-test will continue to display the numbers 4 FF.

#### 2. Mini-Trak Ball Test:

The character doesn't move in same direction as ball, jumps rather than moves smoothly, or doesn't move at all. One of the Coupler PCBs in either Mini-Trak Ball control may be bad, harness wires or connector may be loose, Mini-Trak Ball reading circuitry on Game PCB may be bad, or Mini-Trak Ball bearings may need oiling.

#### 3. Switch Test:

Sound is constantly on, even though you are not activating any switch. Or, no beep is given for any switch, or LED is dark. Indicates a bad switch, loose harness wires, bad LED-driving circuitry, volume turned all the way down, or loose connector.

#### 4. Audio I/O Chip Test:

No increase in volume or decrease in pitch indicates bad custom audio I/O chip at location B/C/D3.

#### 5. Audio I/O Channel Test:

On one out of the four activations, no audio is produced. Indicates one channel is bad in the custom I/O audio chip at location B/C/D3 (replace entire chip).

#### 6. Background Color Test:

Background doesn't change color, or doesn't display all 16 colors. Indicates bad color RAM chip. (RAM failure would have been indicated earlier with from 3 through 10 beeps.)

#### 7. Object Color Test:

Objects don't change color, or don't display all 16 colors. RAM failure.

#### 8. Moving Object Test:

Object doesn't change to another object. ROM/RAM failure.

## G. Option Switch Settings

### 1. Bonus Play Feature

Centipede™ offers a bonus play for certain combinations of coins inserted. This bonus feature is operator-selectable, meaning you may choose to offer it or not.

With your game set at 25¢ per play, players who deposit four successive quarters or a \$1.00 coin, then press the start button, can receive a bonus coin. Therefore, players can receive 5 plays for \$1.00.

This bonus feature encourages players to insert more money than just the minimum 25¢ you could require for one game. Various other bonuses are also available (see Figure 9).

### 2. Coin Mechanism Multipliers

The Atari coin acceptor mount for this game is available with about a dozen different mechanisms. You may have both mechanisms accept the same or different denominations.

Regardless of the type of mechanism you install, you must correctly set the mech “multipliers” on the game PCB. The multipliers determine how much each mechanism will be worth to the game’s logic.

The basic unit of measurement is 25¢, which equals a multiplier of  $\times 1$ . Therefore, if you have a 25¢/\$1 coin acceptors, you will probably want to set the left and right option-switch multipliers at  $\times 1 / \times 4$ .

You can set these multipliers with toggles 3 thru 5 on the Centipede PCB switch assembly at location N8. For exact settings of these toggles, refer to Figure 9.

### 3. Examples of Game Price Settings

Figure 9 explains the options, giving twelve examples of the most common U.S. situations. The toggles mentioned are all in the switch at location N8; they **only** relate to game price, coin mechanism multipliers, and bonus “coins” for inserting multiple quarters or the \$1.00 coin. You should set the toggles relating to other functions as you see fit, although Figures 8, 9, and 10 provide “\$” symbols indicating Atari’s recommendations.

## Figure 8 Game Option Settings

To change toggle positions on the switch assemblies, you need not remove the game PCB. The switches, usually colored blue, are easily accessible when the Centipede Game PCB is mounted in place.

When changing the options, verify proper results on the monitor display **by performing the self-test**. Note that changing an option on any of the following eight toggles will **not** cause an immediate change on the monitor screen during the attract mode.

Toggle Settings of 8-Toggle Switch on Centipede Game PCB (at N9) (CENTER switch assembly when PCB is in game)								Option
8	7	6	5	4	3	2	1	
						On	On	English \$
						On	Off	German
						Off	On	French
						Off	Off	Spanish
				On	On			2 lives per game
				On	Off			3 lives per game \$
				Off	On			4 lives per game
				Off	Off			5 lives per game
		On	On					Bonus life granted at every:
		On	Off					10,000 points
		Off	On					12,000 points \$
		Off	Off					15,000 points
								20,000 points
	On							Hard game difficulty*
	Off							Easy game difficulty* \$
On								1-credit minimum \$
Off								2-credit minimum

\$ Manufacturer's suggested settings

\*Refer to Section F. **Game Play**, in this manual for information on game difficulty.

For pricing for "credits," see Figure 9.

Changing toggles 3-7 erases the high score table.

### Figure 9 Game Price Settings

The white block below contains Atari's suggested settings. All numbers 1 thru 8 are toggle settings on the 8-toggle switch at location N8, on the Centipede™ game PCB (the LEFT switch assembly).

Circled numbers refer to game pricing labels you should use with each situation (labels are on the following page). Use the label no. 6 (indicated with ⑥) only if you set toggle 8 at PCB switch assembly N9 of off.

#### 50¢ PER CREDIT:

	No bonus	Bonus \$1.00 = 3 plays	Bonus \$.75 = 2 plays \$1.00 = 3 plays
<b>25¢/25¢ Mechanisms</b>	① 8 Off 7 Off 6 Off 5 Off 4 Off 3 Off 2 On 1 On	③ 8 Off 7 On 6 On 5 Off 4 Off 3 Off 2 On 1 On	④ 8 Off 7 Off 6 On 5 Off 4 Off 3 Off 2 On 1 On
<b>25¢/\$1.00 Mechanisms</b>	① 8 Off 7 Off 6 Off 5 Off 4 Off 3 On 2 On 1 On	③ 8 Off 7 On 6 On 5 Off ⑤ 4 Off 3 On 2 On 1 On	④ 8 Off 7 Off 6 On 5 Off ⑤ 4 Off 3 On 2 On 1 On

#### 25¢ PER CREDIT:

	No bonus	Bonus \$.50 = 3 plays	Bonus \$1.00 = 5 plays
<b>25¢/25¢ Mechanisms</b>	② 8 Off 7 Off 6 Off 5 Off ⑥ 4 Off 3 Off 2 On 1 Off	⑥ 8 Off 7 Off 6 On 5 Off ⑦ 4 Off 3 Off 2 On 1 Off	⑥ 8 Off 7 On 6 Off 5 Off ⑦ 4 Off 3 Off 2 On 1 Off
<b>25¢/\$1.00 Mechanisms</b>	② 8 Off 7 Off 6 Off 5 Off ⑥ 4 Off 3 On 2 On 1 Off	⑥ 8 Off 7 Off 6 On 5 Off ⑦ 4 Off 3 On 2 On 1 Off	⑥ 8 Off 7 On 6 Off 5 Off ⑦ 4 Off 3 On 2 On 1 Off

## Figure 9 Game Price Settings, continued

For your information, we have defined below the switch settings for those options relating to game price, coin mechanism multipliers, and bonus play. This information is useful in case you need to temporarily set the Centipede™ game on free play, or if you have German coin mechanisms in your door.

To achieve bonus plays, all coins must be inserted before pressing the start button. The label no. 6 shown below should be used **only** if you set toggle 8 at PCB switch assembly N9 to **off**.

Toggle Settings of 8-Toggle Switch on Centipede PCB (at N8—LEFT switch when PCB is in game)								Option
8	7	6	5	4	3	2	1	
							On	Free play
							On	1 coin* for 2 credits
							Off	1 coin* for 1 credit \$
							On	2 coins* for 1 credit
							Off	
				On	On			Right coin mech × 1 \$
				On	Off			Right coin mech × 4
				Off	On			Right coin mech × 5
				Off	Off			Right coin mech × 6
			On					Left coin mech × 1 \$
			Off					Left coin mech × 2
On	On	On						No bonus coins \$
On	On	Off						For every 2 coins* inserted, game logic adds 1 more coin*
On	Off	On						For every 4 coins* inserted, game logic adds 1 more coin*
On	Off	Off						For every 4 coins* inserted, game logic adds 2 more coins*
Off	On	On						For every 5 coins* inserted, game logic adds 1 more coin*
Off	On	Off						For every 3 coins* inserted, game logic adds 1 more coin*

\*In the U.S., a "coin" is defined as 25¢. In Germany a "coin" is 1 DM.

\$ Manufacturer's suggested settings

To achieve bonus plays, all coins must be inserted before pressing start button.

### Game Pricing Labels:

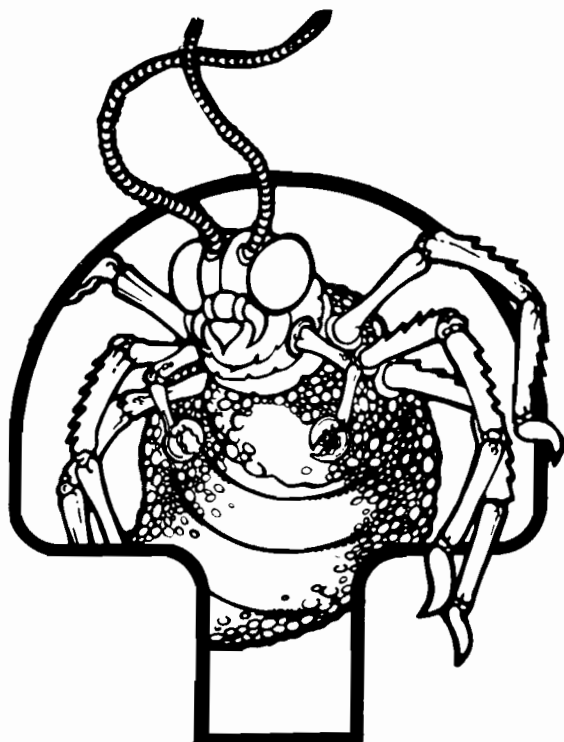

## Figure 10 Coin Counter Option Settings

[These toggles determine which coin mechanisms activate which counters]

Toggle Settings of 4-Toggle Switch on Game PCB (N11)				Two coin acceptors in the coin door:	Two coin acceptors and a push-button utility coin switch in the game:	Three coin acceptors in the coin door:
4	3	2	1			
Not Used	Not Used	On	On	Both acceptors activate all coin counters simultaneously.	<i>Do not use this setting.</i>	All 3 are same denomination and they activate all coin counters simultaneously.
		On	Off	Both acceptors activate 2 counters separately.	<i>Do not use this setting.</i>	Left and center acceptor activate one coin counter; right acceptor activates another coin counter.
		Off	On	Both acceptors activate all coin counters simultaneously.	Utility coin switch will not activate a coin counter, if you do not hook it up. Both acceptors activate one coin counter. <b>\$</b>	Left acceptor activates one coin counter; center and right acceptor activate another coin counter. <i>Not for any currently designed 3-mech coin door.</i>
		Off	Off	Both acceptors activate 2 counters separately.	Utility coin switch will not activate a coin counter, if you do not hook it up. Left and right acceptors activate 2 coin counters separately. <b>\$\$</b>	Left, center and right acceptors activate 3 coin counters separately.

**\$** Manufacturer's suggested settings for games with 1 counter

**\$\$** Manufacturer's suggested settings for games with 2 counters

## H. Game Play

Atari's Centipede™ is a one- or two-player game with a color raster-scan monitor. The fast-moving action includes a variety of creatures dropping down from the top of the screen or flying in from its sides, most of them to attack the player. The player's shooter is represented on the screen by a somewhat humanoid head.

The player's goal is to shoot at and destroy as many of these creatures and mushrooms as possible for a high point score, before the player's lives are used up. Players can maneuver their Mini-Trak Ball™ control anywhere within approximately the bottom fifth of the screen. However, they must move around mushrooms, since these are fixed, not "transparent", objects. A fire button shoots individual shots upwards, or fires a hail of shots if pressed constantly. (Only one shot appears on the screen at a time.)

The game has five possible modes of operation: attract, ready-to-play, play, high score initial, and self-test. Self-test is a special mode for checking the game switches and computer functions. You may enter this mode at any time. When entered, all game credits are cancelled. *Wait at least eight seconds after a game has been played before entering self-test or turning off the power.* Otherwise, you may erase the high score table.

## 1. Attract Mode

The attract mode begins when power is applied to the game, after a play or high score initial mode, or after self-test. This mode is continuous and is only interrupted when a game is paid for and accepted or when in self-test. In this mode, the monitor displays two pictures simultaneously.

One of the pictures is operator-selectable for one of four languages. Placed in the center of the screen, the picture shows the high score table, game price, and the bonus-life achievement level. If the operator sets the Centipede game for free play, the game will not display a game price message.

The high score table shows the eight highest scores and their matching initials. If you erase the special "permanent" memory (see Figure 7, Self-Test Procedure), then this table will contain fictitious scores and initials. The table is redeveloped from subsequent games with scores of more than 12,102 points. Subsection 4, *High Score Initial Mode*, explains this table in more detail.

Operators may choose one- or two-credit minimums by selecting one of the option switch settings on the game PCB (see Figure 7, Game Option Settings).

If the game is set for a 2-credit minimum, that message will be displayed on the screen. (No special message appears if Centipede is set to the opposite setting, namely 1-credit minimum.)

The other picture surrounds the high score table, game price and bonus-life achievement level messages. That picture displays a typical game-play sequence, with a field of colorful mushrooms through which a centipede crawls. The spiders bounce in from the sides of the screen, and fleas occasionally drop down from the top. In addition, scorpions will cross the screen at almost any point.

In this mode, the action exactly duplicates a typical game played by a moderately skilled player: the player's shooter moves freely within the limits of motion, shooting at spiders, centipedes, fleas and scorpions. Periodically the player is "destroyed" when a flea, spider or centipede head or body collides with the player's shooter.

All the colors on the screen change with each wave. A new wave occurs when the player shoots all centipede parts remaining on the screen. At this point, a new centipede starts snaking its way down from the top of the screen.

The attract mode differs from real game play in that no head figures are shown at the top of the screen to represent the number of lives remaining, no sounds are produced, no scores are incremented, and none of the player controls work.

At any time when the game is powered up, if the slam switch is closed, you will hear a special alarm sound. This sound alerts location personnel that the game has been abused.

## 2. Ready-to-Play Mode

This mode begins when sufficient coins are accepted for a one- or two-player game. It ends when the 1-player start or 2-player start pushbutton is pressed. When this mode begins, the message *CREDITS \_\_* is displayed in the middle of the screen. The pictures are otherwise the same as those shown in the attract mode.

If you select the two-credit minimum and a player inserts enough money for only one credit, the message *2 CREDITS MINIMUM* flashes on the screen until enough coins for the second credit are inserted.

In addition, *CREDITS 0½* is displayed if you have selected the option of two coins per credit, and the player has inserted only one coin. A “credit” is defined as the cost for each player to play one game. In other words, two credits will pay for:

- one player playing two games, or
- two players playing one game.

## 3. Play Mode

The play mode begins when any flashing start pushbutton is pressed. The mode ends when the player's last life is lost.

If a two-player game is being played on a cocktail-table game, the screen image will invert 180 degrees with each new life. This places the shooter immediately in front of each player.

A player's shooter is enabled at the beginning of the play mode, and the audio starts. The appropriate LED start switch will then stay lighted until the end of the game. At this point it will flash if any credit remains.

The game begins with a playfield of randomly placed mushrooms. A centipede starts snaking its way across from the center top of the screen. The centipede changes direction when it runs into a mushroom or either the left or right boundaries of the playfield.

When a centipede is shot, it breaks into two smaller ones, each with a head. Also the part of the centipede that was shot leaves a mushroom in its place on the screen. When any centipedes reach the bottom of the screen, they start back up, but remain within the area of the player's shooter (the bottom fifth of the screen).

When a large centipede (that hasn't been shot yet) reaches the bottom, it releases its tail, and this part changes into a new head. Also to provide player challenge, if a centipede is still alive when it reaches the bottom, new heads will enter the screen almost at the bottom of the sides. More of these heads will appear as time progresses.

The randomly moving spiders also appear in the first wave. The spiders can destroy a player, as well as any mushrooms they move over. This eliminates many mushroom targets for a player.

The player's shooter is moved by rotating the Mini-Trak Ball™ control. The shooter can be moved in all directions, but only within the bottom fifth of the screen. Pressing the fire button causes the shooter to fire shots upward, either singly or in rapid-fire mode, if held down constantly.

Mushrooms count 1 point when shot, and a player must fire four shots into a mushroom before it is destroyed and disappears. Centipede body parts count 10 points each, and the elusive heads (represented with small eyes on them) are worth 100 points each. Spiders are worth 300, 600 or 900 points, depending on how close they are to the player when shot.

A bombardment of fleas starts in the second wave; as the fleas descend, they leave a trail of new mushrooms behind them.

In the second wave, the fleas appear when a certain number of mushrooms remains at the bottom of the screen. This number increases as the game progresses, meaning fleas appear more often later on in the game.

Fleas have a value of 200 points when shot, and players must hit them twice to destroy them (the first shot just speeds them up).

The scorpion enters from either side starting in the fourth wave; it moves at a relatively slow speed. Later it increases its speed. When shot, a scorpion counts 1000 points—the highest-value target of all.

As it travels across the screen, it “poisons” the mushrooms that it moves over and changes their colors. These mushrooms cause any centipedes that would collide with them to head straight toward the bottom of the screen, rather than continue snaking around. Players can stop a poisoned centipede by shooting its head.

In addition, these poisoned mushrooms as well as any partially shot mushrooms add 5 points to the player’s score at the end of each life when the screen is resetting.

If the players are very skilled and earn at least 60,000 points, two things happen to increase player challenge: the fleas descend at a faster speed and the spiders restrict their movement to a smaller area at the bottom of the screen.

An important new feature of this game is the operator option for easy/hard game difficulty. In the *easy* game, the spider moves slowly up to a 5,000-point score, and then bounces at a higher speed. It also changes direction less often throughout the game than at the *hard* setting.

In the *hard* setting, the spider moves slowly only for the first 1,000 points, and then speeds up. It also changes direction more often throughout the game. In either setting, the spider always moves at a 45-degree angle or straight up and down.

Another operator option is the number of lives per game, ranging from 2 to 5 (see Figure 8 for switch settings). This number is displayed as small shooters at the top of the screen. The number is decreased by one each time a player is destroyed. The number is increased by one each time the player scores multiples of 10, 12, 15 or 20 thousand points, depending on the operator selection.

#### 4. High Score Initial Mode

If a player’s score exceeds the minimum on the high score initial list, he or she may put up to three initials on this list at the end of the game. At the beginning of this mode, the characters *A \_ \_* appear on the screen. The logic will also display the messages *GREAT SCORE* and *ENTER YOUR INITIALS*.

Players enter initials one character at a time, choosing from the characters *A* thru *Z* and a blank space. Pressing the fire button selects the letter, and rolling the Mini-Trak Ball™ control changes the letters on the screen.

After the fire button is pressed the third time, the initials and score are transferred to the table. This table contains eight scores and appears during the attract and ready-to-play mode.

All but the highest three scores are erased whenever you enter the self-test, or press the *RESET* button on the game PCB, or turn off the power. The resetting replaces the lowest five scores with fictitious scores and initials.

If you erase the special “permanent” memory, the high score table is replaced with eight fictitious scores and initials. In other words, the table will always be displayed on the screen, possibly consisting of one or more realistic scores and players’ initials.

# Maintenance and Repair

All games require certain maintenance to keep them in good working order. Clean, properly maintained games will attract players and earn more profits.

The most important maintenance item is running the self-test every time you collect money from the coin box. Just looking at a game will not tell you if Mini-Trak Ball™ controls, light-emitting-diode switches or leaf switches are broken, or if LEDs have burned out. The self-test will inform you of any of these possible problems.

Second, you should regularly clean the outside of the game and the coin mechanisms. In addition, you will need to regularly clean the leaf switch contacts and lubricate the Mini-Trak Ball control: for details see this chapter.

# 2

**Figure 11 Opening the Control Panel and Replacing Switches**

## A. Cleaning

The exterior of the game cabinet and the metal, glass, and plastic surfaces may be cleaned with any non-abrasive household cleaner. If desired, special coin machine cleaners that leave no residue can be obtained from your distributor.

The large table top is made of tempered glass and should be scratch-resistant. If cleaned without abrasive substances, you should hardly ever have to replace it.

## B. Fuse Replacement

This game contains six fuses—all on the power supply assembly (not including the monitor fuses). Replace fuses only with the same type as listed in Figure 24 of this manual. See the Matsushita monitor manual, TM-153, for the monitor fuse data.

## C. The Control Panel

Prior to repairing or replacing any switch or the Mini-Trak Ball™ on the control panel, unplug the game. Next, open the game top as described in Chapter 1, Section B, *Opening the Game Cabinet*.

Finally, remove the two sets of button-head screws and lock washers at the top edge of the control panel. Once this hardware is removed, the control panel will tilt toward you.

After servicing the start switches or any components on the control panels, **be sure you reconnect the harness wires to the proper termination points**, as shown in Figure 12. Otherwise the controls may not work properly—causing frustration in players and possibly reduced income from the game.

## 1. LED Start-Switch Replacement

The light-emitting diode (LED) switches near the control panel have a very low failure rate. In case a switch should ever be suspect, first test it per the description that follows. To replace the switch, refer to Figure 11.

- Remove the wires from the suspected switch.
- Set multimeter to ohms scale. Set ohms scale to  $R \times 1$ , then zero the meter.
- Connect multimeter leads to appropriate LED switch contacts (see Figure 11 for designation of switch contacts and meter lead placement).
- Check contacts (push and release the switch button) for closed and open continuity.
- If the contacts do not operate sharply or always remain closed or open, then replace the LED switch as outlined in the figure.

## 2. Leaf Switch Replacement

### NOTE

Adjust switches for a narrow gap. When a switch button is depressed, the resulting wiping action of the contacts provides a self-cleaning feature.

All five of these leaf switches operate on 5 volts at a very low current. Therefore, pitting of these switches would be extremely rare. Probably the only reason that pitting would occur is that the game is in a very high-humidity location.

**Don't burnish the switches.** Burnishing them removes their plating, thus increasing the corrosion of the contacts. **The best method of cleaning the switch contacts is to wipe them with a non-abrasive surface.** A business card works very well.

**CAUTION**  
Players may receive an electric shock if this control panel is not properly grounded! After servicing any parts on the panel, check that the ground wire is firmly attached to the metal tab on the inside of the control panel. Only *then* should you lock up the game.

Figure 12 Control Panel Wiring

To replace any switch, remove both of its screws with a Phillips-head screwdriver—see Figure 11.

If the white button itself needs to be replaced, turn the stamped nut with a wrench in a counter-clockwise direction, as seen from the inside of the control panel. The white ring on the outside of the control panel should not spin, due to its design.

### 3. Mini-Trak Ball™ Maintenance and Repair

The Mini-Trak Ball™ control requires lubrication of its bearings approximately every 6,000 credits or every 3 months. To lubricate or repair the control, remove the control from the control panel and disassemble it as illustrated in Figure 13.

Use **only 2 drops** of 3-in-One® oil in each of six ball bearings of the Mini-Trak Ball control.

For further instructions on how to replace the ball, either coupler PCB or either encoding wheel, see Figure 13.

Disassemble in the order indicated. (Circled numbers match the steps described below.)

#### Ball Replacement

1. First remove the entire Mini-Trak Ball assembly from the control panel as shown in Figure 11. Now locate the six "twin-lead" thread-forming screws in the black frames (plastic pieces); remove these six screws.
2. Lift off the top frame; remove and replace the ball.

#### Coupler PCB and Encoding Wheel Replacement

3. Lift the PCB out of its slot. Carefully unplug the red connector on the coupler PCB.
4. To replace either encoding wheel, remove the PCB from its slot. Remove the socket-head machine screw, flat washer, and split lock washer that secure the encoding wheel. Remove the wheel.
5. When replacing the coupler PCB, be certain that the black metal encoding wheel has not been bent or damaged. It should turn freely between the two halves of the red photosensor device.

## D. Monitor Removal

### WARNING

#### **Shock Hazard**

High voltages may exist in any television or monitor, even with power disconnected. Use extreme caution and do not touch electrical parts of the yoke area with your hands or with metal objects in your hands!

#### **Implosion Hazard**

If you drop the monitor and the picture tube breaks, **it will implode!** Shattered glass and the yoke can fly 6 feet or more from the implosion. Use care when replacing any monitor.

If you should need to remove the color monitor, follow steps 1 thru 5 as listed on this page. Refer also to Figure 14.

1. **Be sure the game is unplugged from its wall outlet!** Unlock and open the table top.
2. Lift up the "U"-shaped security bar, located along the inside wall of the cabinet. Remove the bar entirely from the cabinet. Remove the access panel from the side of the game.
3. Locate the 6-pin monitor and 3-pin power connectors underneath the monitor, just above the power-supply transformer. Unplug these connectors.
4. Remove the four Phillips-head screws and flat washers (one set at each corner of the monitor screen). These attach the large monitor brackets to the cabinet.
5. Carefully lift the monitor assembly up and out the cabinet.

Disassemble in the order indicated. (Circled numbers match the steps above.)

Figure 14 Monitor Removal

**CAUTION**

Be sure to let the game cool down (with power turned off and the table top open) for at least 10 minutes. The large black heat sink on the Regulator/Audio II PCB gets fairly hot. You could burn yourself on this heat sink while removing the PCB.

Figure 15 Printed-Circuit Board Removal

## E. Printed-Circuit Board Removal

You may wish to remove the game printed-circuit board (PCB) or the Regulator/Audio II PCB for service or inspection. To do this, refer to Figure 15 and proceed as follows:

### 1. Game PCB Removal

- Unlock and open the table top.
- Remove the four beaded nylon tie-wraps from the top side of the game PCB. Then remove the two edge connectors.
- Locate the Phillips-head screws that extend through the PCB and into the two wood blocks near the top of the game. Remove and save these screws and the associated fiber washers.
- Remove the PCB from the game by carefully sliding it straight up out of the plastic PCB retainers. Be careful not to twist the board, as this

may loosen connections or components. Replace or repair as required.

- After servicing it, reinstall the PCB, making sure that the edge connectors are properly plugged in. Note that the connectors are keyed to fit on only one way, so if they don't slip on easily, don't force them! **A reversed connector will probably damage your game** and will void the warranty.
- Check that the operation of the game is correct by **performing the self-test**. This is especially important with any game when you replace a PCB.

### 2. Regulator/Audio II PCB Removal

- Unlock and open the table top.
- Remove the five plug-in connectors on the Regulator/Audio II PCB. Note that all of these connectors are keyed for proper orientation.
- Remove the PCB from the inside wall of the cabinet by pulling it up and out of the wood retainers.

Figure 16 Speaker Replacement

## F. Speaker Replacement

### CAUTION

Be sure to let the game cool down (with power turned off and the table top open) for at least 10 minutes. The large black heat sink on the Regulator/Audio I PCB gets fairly hot, and you could burn yourself on this heat sink while removing the PCB.

If the loudspeaker should ever need to be replaced, follow these instructions and refer to Figure 16. Probably the only cause of speaker failure is an open voice coil or a ruptured cone, but both of these failures are highly unlikely.

Open the table top. Unplug both speaker-wire connectors. Use a very short-handled Phillips screwdriver to remove the two screws. For greater ease in reaching these screws, and to prevent slipping and damaging the Regulator/Audio II PCB, remove this PCB first.

## G. Game Operation

With this manual you received two large sheets that contain the wiring and schematic diagrams for the Centipede™/Cocktail game. Sheet 1, Side A, includes a "table of contents" that shows the arrangement of these diagrams. They explain the functions of the circuits; the diagrams also define inputs and outputs.

Atari's Centipede™ is a microprocessor-controlled game. The microprocessor is mounted on the game PCB. The game PCB receives switch inputs from the control panels and coin acceptors. These inputs are processed by the game PCB and output to the monitor, Regulator/Audio II PCB, loudspeaker and control panel.

The Regulator/Audio II PCB performs two functions: 1) it regulates the +10 VDC from the power supply to +5 VDC, and 2) it amplifies the audio output from the game PCB. The +5 VDC from the Regulator/Audio II PCB provides most logic power to the game PCB. The audio output from the Regulator/Audio II PCB directly drives the game speaker and is controlled by the volume control, mounted on a bracket inside the game cabinet.

The power supply is the source of all voltages in the game. These voltages are protected by three fuses (F3, F4 and F5) on the power supply chassis. The primary winding of the power-supply transformer is protected by the fuses F1 and F2 on the power-supply chassis.

Figure 17 illustrates the distribution of power in this game. Figure 18 illustrates the distribution of signals.

Figure 17 Power Distribution

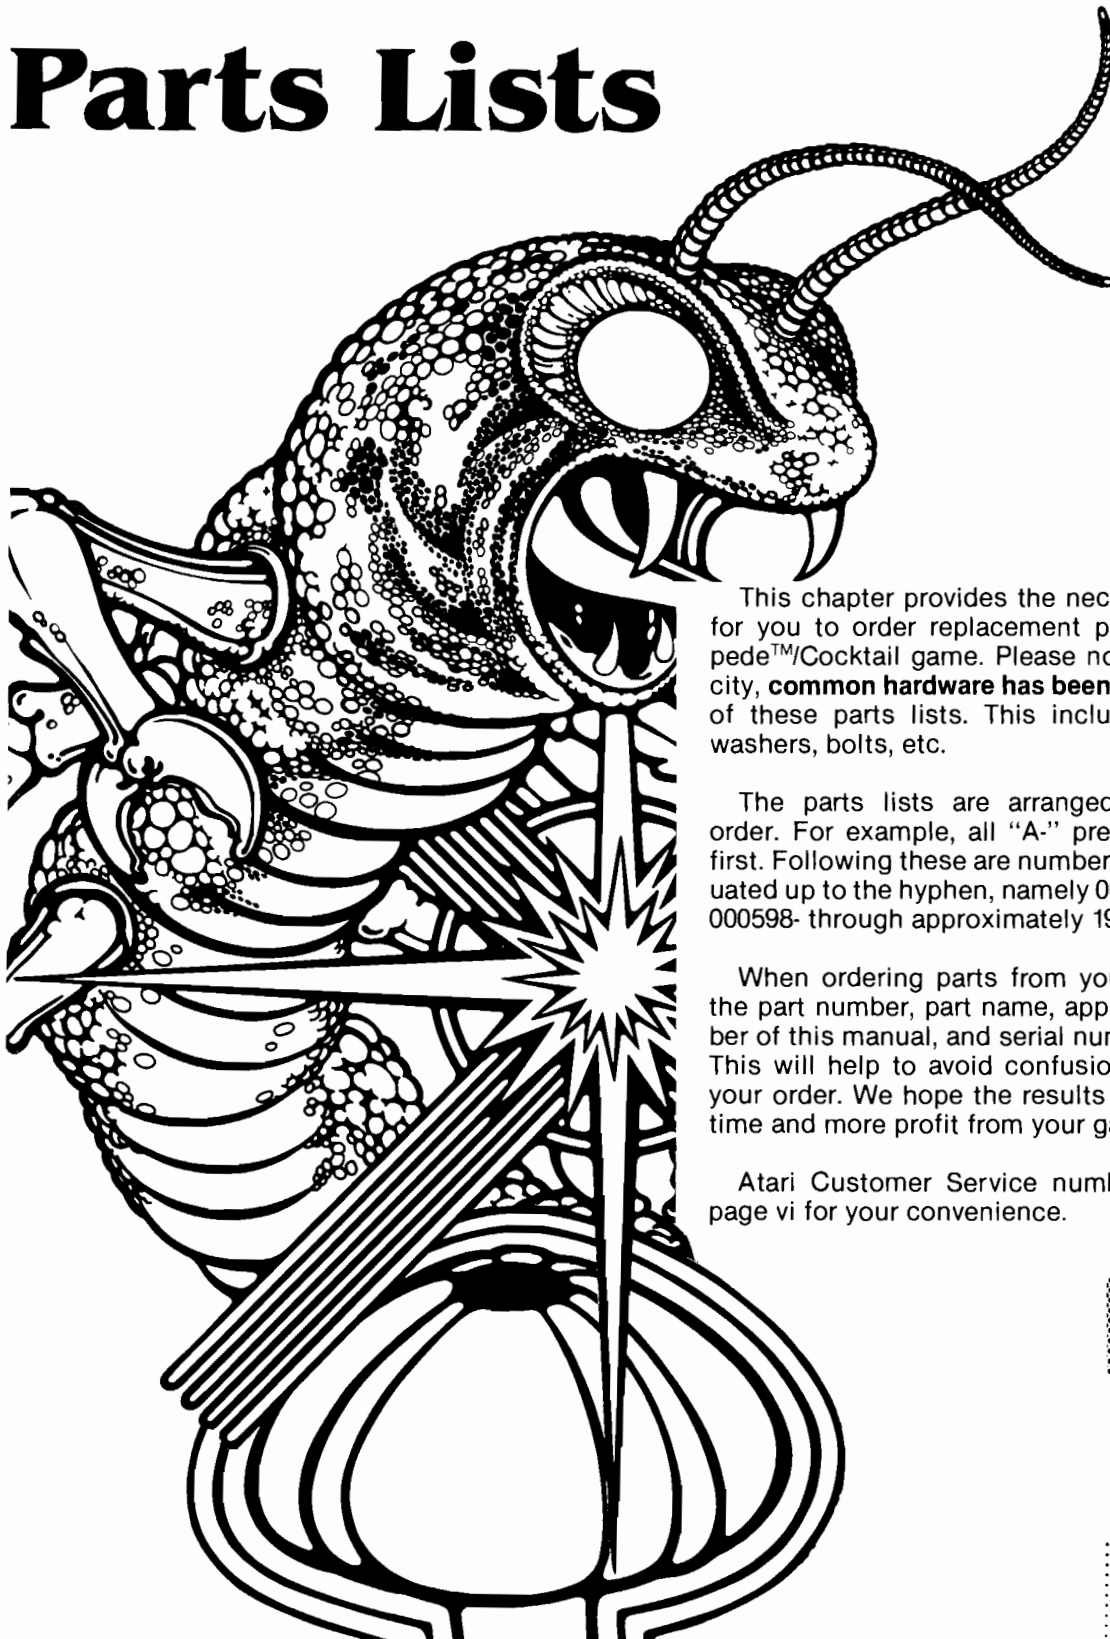

Figure 18 Signal Distribution

# Illustrated Parts Lists

This chapter provides the necessary information for you to order replacement parts for the Centipede™/Cocktail game. Please note that, for simplicity, **common hardware has been deleted** from most of these parts lists. This includes screws, nuts, washers, bolts, etc.

The parts lists are arranged in alphanumeric order. For example, all "A-" prefix numbers come first. Following these are numbers in sequence evaluated up to the hyphen, namely 00- through 99-, then 000598- through approximately 190000-.

When ordering parts from your distributor, give the part number, part name, applicable figure number of this manual, and serial number of your game. This will help to avoid confusion and mistakes in your order. We hope the results will be less downtime and more profit from your game.

Atari Customer Service numbers are listed on page vi for your convenience.

34-2N3904	Type-2N3904 NPN Silicon Transistor (Q1, 2, 4, 5)
34-2N6044	Type-2N6044 Darlington NPN Transistor (Q6-8)
37-LM324	Type-LM324 Integrated Circuit (K10)
37-4584B	Type-4584B CMOS Integrated Circuit (E/F10, E/F11)
37-555	Type-555 Timer Integrated Circuit (A11)
37-74LS00	Type-74LS00 Integrated Circuit (L8)
37-74LS04	Type-74LS04 Integrated Circuit (K3)
37-74LS08	Type-74LS08 Integrated Circuit (B7, K4)
37-74LS10	Type-74LS10 Integrated Circuit (L3, K2)
37-74LS20	Type-74LS20 Integrated Circuit (A7)
37-74LS32	Type-74LS32 Integrated Circuit (A4, C5, E3, F3, J3)
37-74LS42	Type-74LS42 Integrated Circuit (H3)
37-74LS74	Type-74LS74 Integrated Circuit (D4, D11, M3)
37-74LS83	Type-74LS83 Integrated Circuit (F6, H6)
37-74LS86	Type-74LS86 Integrated Circuit (E7)
37-74LS90	Type-74LS90 Integrated Circuit (L2)
37-74LS139	Type-74LS139 Integrated Circuit (C4, J2)
37-74LS153	Type-74LS153 Integrated Circuit (C7, E8, K6, L6, M6, N6, P6)
37-74LS157	Type-74LS157 Integrated Circuit (D7, D8, D/E11, F8, H8, J8, K8, P5)
37-74LS163A	Type-74LS163A Integrated Circuit (A5, B5, M2, N2, N3, P2, P3)
37-74LS166	Type-74LS166 Integrated Circuit (H9, J9)
37-74LS174	Type-74LS174 Integrated Circuit (C6, D6, E6, J4)
37-74LS175	Type-74LS175 Integrated Circuit (A8, E4, M4, N4)
37-74LS191	Type-74LS191 Integrated Circuit (B11, C11)
37-74LS244	Type-74LS244 Integrated Circuit (B1, C1, H5)
37-74LS245	Type-74LS245 Integrated Circuit (E2)
37-74LS257	Type-74LS257 Integrated Circuit (D9, D/E10, K9, L9, P7, M8, M9)
37-74LS259	Type-74LS259 Integrated Circuit (M10)
37-74LS273	Type-74LS273 Integrated Circuit (B4, J6)
37-74LS373	Type-74LS373 Integrated Circuit (J5)
37-74LS374	Type-74LS374 Integrated Circuit (H4)
37-74S04	Type-74S04 Integrated Circuit (N1)
37-74S74	Type-74S74 Integrated Circuit (E9, F9)
37-7407	Type-7407 Integrated Circuit (A9, A/B10)
37-7815	+ 15V Voltage Regulator (VR2)
37-7915	- 15V Voltage Regulator (VR1)
38-MV5053	Type-MV5053 Light-Emitting Diode (CR3)

[Continued on next page]

## Figure 22 Centipede™ PCB Assembly, continued Parts List

Part No.	Description (Reference Designations and Locations in Bold)
41-3003	100 uH, ± 5%, Hot-Molded Plastic Fixed R.F. Choke (L1-3)
62-001	SPST Momentary Pushbutton Switch (Reset)
66-114P1T	4-Station, Single-Throw, Dual-Inline-Package Bit Switch (N11)
66-118P1T	8-Station, Single-Throw, Dual-Inline-Package Bit Switch (N8, N9)
79-42C16	16-Contact Medium-Insertion-Force Integrated Circuit Socket (P4)
79-42C22	22-Contact Medium-Insertion-Force Integrated Circuit Socket (E5)
79-42C24	24-Contact Medium-Insertion-Force Integrated Circuit Socket (F7, H/J7, D1, E1, F/H1, J1)
79-42C40	40-Contact Medium-Insertion-Force Integrated Circuit Socket (C2, C3)
81-4302	Nylon Snap-In Fastener
90-102	12.096 MHz ± .005%, Crystal (Y1) <i>Acceptable substitute is part no. 144000-001.</i>
90-6013	Microprocessor 6502A (C2)
90-7005	Random-Access Memory (C8)
90-7018	Random-Access Memory (K5, K7, L5, L7, M5, M7, N5, N7)
90-7033	Random-Access Memory (F2, H2)
020670-01	Test Point
110000-102	1K Ohm, ± 5%, ¼W Resistor (R9-11, 13-16, 23-28, 31-38, 55-60, 67, 68, 77, 79, 80, 87-89, 94, 95, 99, 104, 109, 114-123, 134, 136-141, 148, 149)
110000-103	10K Ohm, ± 5%, ¼W Resistor (R1, 2, 6-8, 12, 17-22, 29, 30, 39-54, 70, 71, 83-86, 130-133, 147, 150)
110000-104	110K Ohm, ± 5%, ¼W Resistor (R81, 82, 105, 106)
110000-105	100 MegOhm, ± 5%, ¼W Resistor (R5)
110000-152	1.5K Ohm, ± 5%, ¼W Resistor (R108)
110000-221	220 Ohm, ± 5%, ¼W Resistor (R3, 62, 64, 66, 72, 74-76, 78, 135)
110000-222	2.2K Ohm, ± 5%, ¼W Resistor (R107)
110000-331	330 Ohm, ± 5%, ¼W Resistor (R61, 63, 65, 73)
110000-332	3.3K Ohm, ± 5%, ¼W Resistor (R69, 143-146, 151-154)
110000-471	470 Ohm, ± 5%, ¼W Resistor (R90-93, 96-98, 100, 110-113, 124-129, 142)
110000-560	56 Ohm, ± 5%, ¼W Resistor (R101, 102)
110000-563	56K Ohm, ± 5%, ¼W Resistor (R4)
122002-102	.001 uf Ceramic-Disc 50V Radial-Lead Capacitor (C4)
122004-224	.22 uf Ceramic-Disc 25V Radial-Lead Capacitor (C65)
122005-103	.01 uf Ceramic-Disc 25V Radial-Lead Capacitor (C53)
128002-101	100 pf Radial-Lead Epoxy-Dipped 100V Mica Capacitor (C1)
128002-102	1000 pf Radial-Lead Epoxy-Dipped 100V Mica Capacitor (C98, 99)
128002-221	220 pf Radial-Lead Epoxy-Dipped 100V Mica Capacitor (C38, 39)
128002-390	39 pf Radial-Lead Epoxy-Dipped 100V Mica Capacitor (C2)
136001-201 or -211	Read-Only Memory (F7)
136001-202 or -212	Read-Only Memory (H/J7)
136001-303 or -307	Read-Only Memory (D1)
136001-304 or -308	Read-Only Memory (E1)
136001-305 or -309	Read-Only Memory (F/H1)
136001-306 or -310	Read-Only Memory (J1)
136001-213	Programmable Read-Only Memory (P4)
137161-001	Type-ER2055 Integrated Circuit (E5) <i>Note: If you replace this part, you must erase this ROM before locking up the game. See Figure 7, Self-Test Procedure, in this manual for instructions.</i>
137169-001	Type-74LS107 Integrated Circuit (L4)
137170-001	Random-Access Memory (A6, B6) <i>Acceptable substitute is part no. 90-7035.</i>

**NOTICE TO ALL PERSONS RECEIVING THIS DRAWING**  
 CONFIDENTIAL: Reproduction forbidden without the specific written permission of Atari, Inc., Sunnyvale, CA. This drawing is only conditionally issued, and neither receipt nor possession thereof confers or transfers any right in, or license to use, the subject matter of the drawing or any design or technical information shown thereon, nor any right to reproduce this drawing or any part thereof. Except for manufacture by vendors of Atari, Inc., and for manufacture under the corporation's written license, no right to reproduce this drawing is granted or the subject matter thereof unless by written agreement with or written permission from the corporation.

**A035435-02 E**

## Figure 23 Regulator/Audio II PCB Assembly Parts List

Part No.	Description (Reference Designations and Locations in Bold)
12-52P7	2.7 Ohm, $\pm 5\%$ , 1W Resistor (R5)
16-54P0	4 Ohm, $\pm 5\%$ , 5W Wirewound Resistor (R25)
19-100P1015	.1 Ohm, $\pm 3\%$ , 7W Wirewound Resistor (R24)
19-315102	1K Ohm Vertical PCB-Mounting Cermet Trimpot (R8)
24-250108	1000 uf Aluminum Electrolytic Fixed Axial-Lead 25V Capacitor (C13)
24-250477	470 uf Aluminum Electrolytic Fixed Axial-Lead 25V Capacitor (C1, 4, 12)
24-350226	22 uf Aluminum Electrolytic Fixed Axial-Lead 35V Capacitor (C24, 31)
24-350338	3300 uf Aluminum Electrolytic Fixed Axial-Lead 35V Capacitor (C9, 10, 18, 19)
24-500105	1 uf Aluminum Electrolytic Fixed Axial-Lead 50V Capacitor (C22, 23)
29-088	.1 uf Ceramic-Disc 25V Radial-Lead Capacitor (C3, 11, 20, 21)
31-1N4002	100V 1-Amp. Silicon Rectifier Type 1N4002 Diode (CR1, 4)
31-1N5401	100V 3-Amp. Silicon Rectifier Type 1N5401 Diode (CR5-8)
33-TIP32	PNP Power Transistor, Type TIP32 (Q2)
34-2N3055	NPN Silicon Transistor, Type 2N3055 (Q3)
37-LM305	5V Linear Voltage Regulator (Q1)
37-7812	+ 12V Voltage Regulator, Type 7812 (Q8)
37-7905	- 5V Voltage Regulator, Type 7905 (Q9)
72-1608C	#6-32 $\times$ 1/2-Inch Cross-Recessed Pan-Head Corrosion-Resistant Steel Machine Screw
72-6606S	#6 $\times$ 3/8-Inch Pan-Head Thread-Forming Cross-Recessed Type-AB Zinc-Plated-Steel Screw (Q8)
75-F60405	#6-32 $\times$ 1/4-Inch Binder-Head Nylon Screw (Q5, 7)
75-99516	#6-32 Nut/Washer Assembly
78-16008	Thermally Conductive Compound (Q3)
78-16014	Thermally Conductive Silicon Insulator (Q2, 9)
79-58306	6-Position Connector Receptacle (J6, 9)
79-58308	9-Position Connector Receptacle (J7)
79-58346	12-Position Connector Receptacle (J10)
79-58354	4-Position Connector Receptacle (J8)
020670-01	Test Point
034531-01	Heat Sink
100015-103	.01 uf Ceramic-Disc 25V Radial-Lead Capacitor (C5, C14)
110000-010	1 Ohm, $\pm 5\%$ , 1/4W Resistor (R10, 19)
110000-100	10 Ohm, $\pm 5\%$ , 1/4W Resistor (R11, 20, 29, 30)
110000-101	100 Ohm, $\pm 5\%$ , 1/4W Resistor (R4, 12, 22)
110000-102	1K Ohm, $\pm 5\%$ , 1/4W Resistor (R27, 28)
110000-103	10K Ohm, $\pm 5\%$ , 1/4W Resistor (R13, 14)
110000-271	270 Ohm, $\pm 5\%$ , 1/4W Resistor (R1)
110000-330	33 Ohm, $\pm 5\%$ , 1/4W Resistor (R3)
110000-392	3.9K Ohm, $\pm 5\%$ , 1/4W Resistor (R6)
110000-562	5.6K Ohm, $\pm 5\%$ , 1/4W Resistor (R32, 33)
110000-752	7.5K Ohm, $\pm 5\%$ , 1/4W Resistor (R7)
110001-221	220 Ohm, $\pm 5\%$ , 1/2W Resistor (R9, 21)
116000-220	22 Ohm, $\pm 5\%$ , 10W Wirewound Resistor (R31)
122002-102	.001 uf Ceramic-Disc Minimum 25V Radial-Lead Capacitor (C2, 7, 16)
122004-224	.22 uf Ceramic-Disc 25V Capacitor (C6, 8, 15, 17)
137151-002	Type TDA2002A 8W Linear Audio Amplifier Integrated Circuit (Q5, 7)

**Figure 24 Power Supply Assembly for Color Raster-Scan Games**  
**A036099-01 A**

## Figure 24 Power Supply Assembly for Color Raster-Scan Games Parts List

<i>Part No.</i>	<i>Description</i>
A006555-01	Rectifier Printed Circuit Board Assembly
A036098-01	Transformer and Harness Assembly ( <i>includes shielded power transformer</i> ) <b>(T1)</b>
A034629-01	AC Harness Assembly
A034630-01	RFI Filter Assembly <b>(FL1)</b>
A035674-01	Voltage Plug Assembly ( <i>set of four plugs</i> )
29-053	26,000 uf 15V Electrolytic Capacitor <b>(C1)</b>
46-2013002	3-Amp. 250V 3AG Slow-Blow Glass Cartridge-Type Fuse <b>(F4-F6)</b>
46-2017002	7-Amp. 250V 3AG Slow-Blow Glass Cartridge-Type Fuse <b>(F1-F3)</b>
78-2708	Nylon Type 6/6 Hole Bushing with $\frac{5}{8}$ -Inch Inside Diameter $\times$ $\frac{55}{64}$ -Inch Outside Diameter $\times$ $\frac{1}{4}$ -Inch Thick
78-70501SC	2-Inch-Diameter Capacitor Mounting Bracket
79-15021001	2-Circuit Single-Row Terminal Block
79-3206	5-Position 3AG Fuse Block with $\frac{1}{4}$ -Inch Quick-Disconnect Terminals
79-4411001	Panel-Mounting Non-Indicating 3AG Cartridge-Type Fuse Post
034482-02	Metal Power-Supply Chassis ( <i>acceptable substitute is Atari part no. 034482-01</i> )
034544-01	Fuse Block Cover
142001-001	Shielded Power Transformer Only ( <i>with isolation windings</i> )

A036693-06 — German 1 DM/1 DM Coin Door	A036693-13 — Swedish 1 Kr/1 Kr Coin Door	A036693-20 — Australian 20¢/20¢ Coin Door
A036693-07 — German 2 DM/1 DM Coin Door	A036693-14 — Hong Kong \$1/\$1 Coin Door	

Part No.	Description
A036597-01	Double Coin Acceptor Harness Assy.
99-15001	Coin Return Button with U.S. 25¢ Price Plate
99-15002	Coin Return Button with U.S. \$1 Price Plate
99-15003	Coin Return Button with German 1 DM Price Plate
99-15004	Coin Return Button with German 2 DM Price Plate
99-15005	Coin Return Button with German 5 DM Price Plate
99-15006	Coin Return Button with Belgian 5 Fr Price Plate
99-15007	Coin Return Button with French 1 Fr Price Plate
99-15008	Coin Return Button with Japanese 100 Yen Price Plate
99-15009	Coin Return Button with British 10 Pence Price Plate
99-15010	Coin Return Button with Australian 20¢ Price Plate
99-15011	Coin Return Button with Italian 100 Lire Price Plate
99-15012	Coin Return Button with U.S. 50¢ (2 × 25¢) Price Plate
99-15013	Coin Return Button with British 20 Pence Price Plate
99-15014	Coin Return Button with British 50 Pence Price Plate
99-15015	Coin Return Button with French 2 Franc Price Plate
99-15016	Coin Return Button with Swiss 1 Franc Price Plate
99-15017	Coin Return Button with Hong Kong \$1 Price Plate
99-15025	Left Half of Coin Inlet
99-15026	Right Half of Coin Inlet
99-15027	Side Plate of Coin Return Box
99-15028	Base Plate of Coin Return Box
99-15029	Switch Bracket
99-15030	Flap for Lockout Coil (U.S. 25¢)
99-15036	Coin Return Cover
99-15037	Switch Adjuster
99-15038	Bezel for Coin Return Button
99-15039	Bezel for Coin Return Cover
99-15040	Coin Return Lever
99-15041	Lockout Coil
99-15042	Coin Switch for U.S. 25¢
99-15051	Lamp Holder
99-15052	Spring for Coin Return Button
99-15053	Spring for Lockout Coil
99-15054	Pivot for Coin Return Lever
99-15055	Retaining Screw
99-15056	Screw for Both Bezels
99-15060	Switch Cover

# YOUR COMMENTS, PLEASE!

Centipede™/Cocktail  
2nd printing

Your comments will assist Atari in improving the usefulness of our publications. They are an important part of preparing for revisions of manuals and parts catalogs. No postage stamp is necessary if mailed in the U.S.A.

If you have any technical questions about certain Atari or Kee Games products, or are requesting additional publications, we will immediately forward your note to the appropriate person.

# Warranty

Seller warrants that its printed circuit boards and parts thereon are free from defects in material and workmanship under normal use and service for a period of ninety (90) days from date of shipment. Seller warrants that its television monitors (in games supplied with monitors) are free from defects in material and workmanship under normal use and service for a period of thirty (30) days from date of shipment. None of the Seller's other products or parts thereof are warranted.

If the products described in this manual fail to conform to this warranty, Sellers' sole liability shall be, at its option, to repair, replace, or credit Buyer's account for such products which are returned to Seller during said warranty period, provided:

- (a) Seller is promptly notified in writing upon discovery by Buyer that said products are defective;
- (b) Such products are returned prepaid to Sellers' plant; and
- (c) Seller's examination of said products discloses to Seller's satisfaction that such alleged defects existed and were not caused by accident, misuse, neglect, alteration, improper repair, installation or improper testing.

In no event shall Seller be liable for loss of profits, loss of use, incidental or consequential damages.

*Except for any express warranty set forth in a written contract between Seller and Buyer which contract supersedes the terms of this order, this warranty is expressed in lieu of all other warranties expressed or implied, including the implied warranties of merchantability and fitness for a particular purpose, and of all other obligations or liabilities on the Seller's part, and it neither assumes nor authorizes any other person to assume for the Seller any other liabilities in connection with the sale of products under this order.*

The use of any non-Atari parts may void your warranty, according to the terms of the warranty. The use of any non-Atari parts may also adversely affect the safety of your game and cause injury to yourself and others. Be very cautious in using non-Atari-supplied components with our games, in order to insure your safety.

Atari distributors are independent, being privately owned and operated. In their judgment they may sell parts or accessories other than Atari parts or accessories. Atari cannot be responsible for the quality, suitability or safety of any non-Atari part or any modification including labor which is performed by such distributor.

*This document is and contains confidential trade secret information of Atari, Inc.*

*This document is loaned under confidential custody for the sole purpose of operation, maintenance or repair of Atari equipment and may not be used by or disclosed to any person for any other purpose whatever, and remains the property of Atari, Inc.*

*Neither it nor the information it contains may be reproduced, used, or disclosed to persons not having a need to know consistent with the purpose of the loan, without written consent of Atari, Inc.*
