WARNING

**THIS GAME MUST BE GROUNDED. FAILURE TO DO SO MAY
RESULT IN DESTRUCTION TO ELECTRONIC COMPONENTS.**

WARNING: This equipment generates, uses, and can radiate radio frequency energy and if not used in accordance with the instructions manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a CLASS A computing device pursuant to SUBPART J of PART 15 of FCC RULES, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

ELECTRICAL BULLETIN: FOR ALL APPARATUS COVERED BY THE CANADIAN STANDARDS ASSOCIATION (CSA) STANDARD C22.2 NO. 1, WHICH EMPLOYS A SUPPLY CORD TERMINATED WITH A POLARIZED 2-PRONG ATTACHMENT PLUG.

CAUTION: TO PREVENT ELECTRIC SHOCK DO NOT USE THIS (POLARIZED) PLUG WITH AN EXTENSION CORD, RECEPTACLE OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

ATTENTION: POUR PREVENIR CHOCS ELECTRIQUES NE PAS UTILISER CETTE FICHE POLARISEE AVEC UN PROLONGATEUR, UNE PRISE DE COURANT OU UNE AUTRE SORTIE DE COURANT, SAUF SI LES LAMES PEUVENT ETRE INSEREES A FOND SANS EN LAISSER AUCUNE PARTIE A DECOUVERT.

NFL SCORING

DESCRIPTION	POINTS AWARDED
TOUCH DOWN	7 POINTS
FIELD GOAL	3 POINTS

I LOCATION AND SET-UP

INSPECTION:

1. Remove the game from its shipping crate.
2. Inspect the entire outside of it for any signs of damage.

- Any scratches?, dents?, cracks?
- Any broken controls?
- Any broken glass or plastic?
- Just look it over closely and make a note of any signs of damage.

3. Remove the shipping cleats from the bottom of the cabinet.

UPRIGHT MODELS ONLY: In order to help prevent easy theft of your game, you may wish to remove the Caster Wheel Assemblies from the bottom of your cabinet at this time.

4. Install the four levelers, one at each corner of the cabinet. See Figure 1-1.

Level the cabinet.

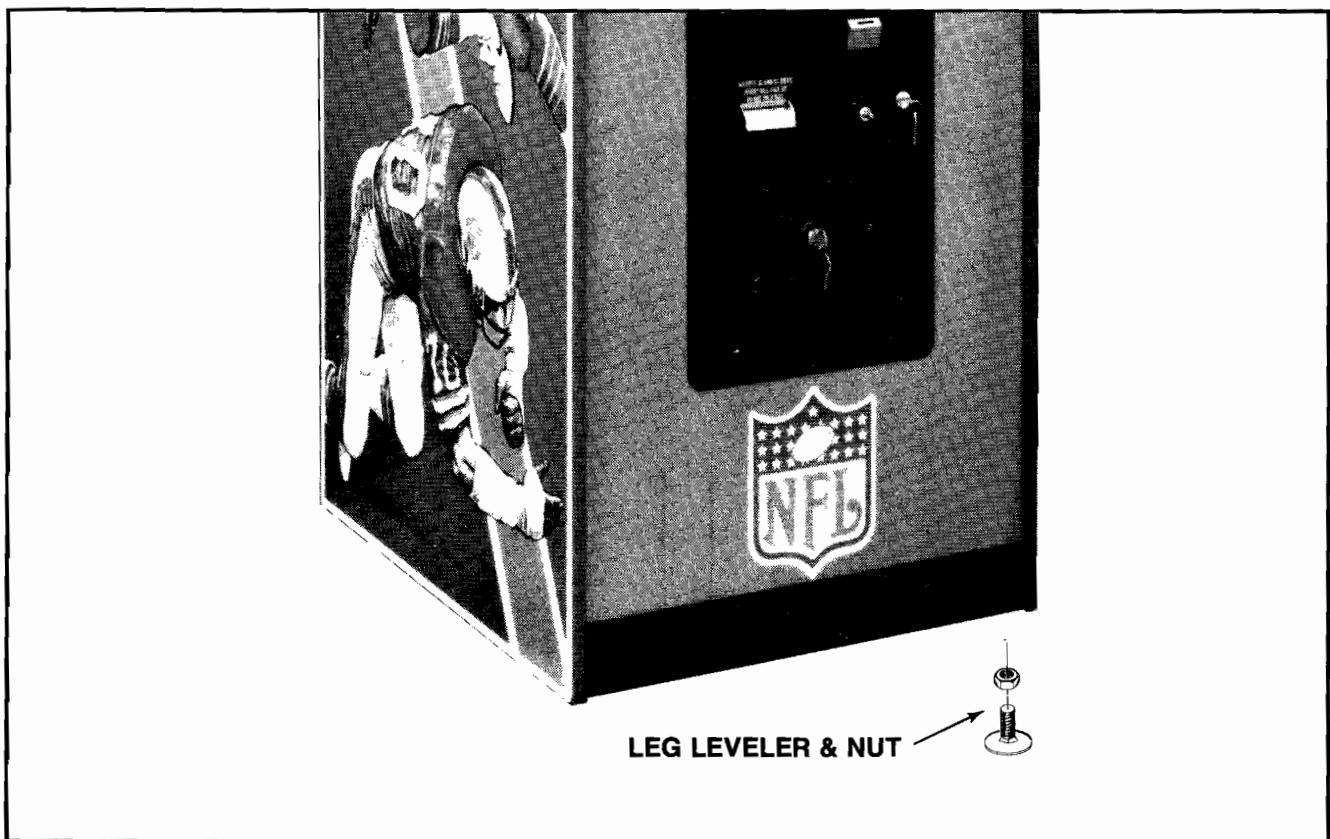

Figure 1-1 Leg Leveler Installation

5. Open the cabinet and inspect the inside of the game for any signs of damage. See Figure 1-2.
 - Also check to make sure all plug-in connectors on the wire harness are firmly seated.

NOTE: ALL connectors or plugs are keyed so they will only go together when all pins are properly lined up.

 - Re-plug any connectors found unplugged. DO NOT FORCE PLUGS ONTO CONNECTORS. DO NOT FORCE PLUGS TOGETHER. If it won't go on easily, assuming the keys are lined up, it either does not belong there or is damaged.
 - Make sure all printed circuit boards (P.C.B.'s) are firmly seated in their connectors. See Figure 1-2. These connectors are also keyed. The P.C.B.'s will only go in to them one way without being damaged.
- Note the location of the games serial number. See Figure 1-2.
- Check all major subassemblies to be sure they are mounted securely. These are called out in Figure 1-2.
- Power supply.
Control panel(s).
T.V. monitor.
Other P.C.B.'s and/or P.C.B. rack, etc.
Power Chassis Assembly.
Video Disc Player.
6. Make a note of any problems that can't be easily corrected.
 7. Call your distributor and/or service man about your problem list.

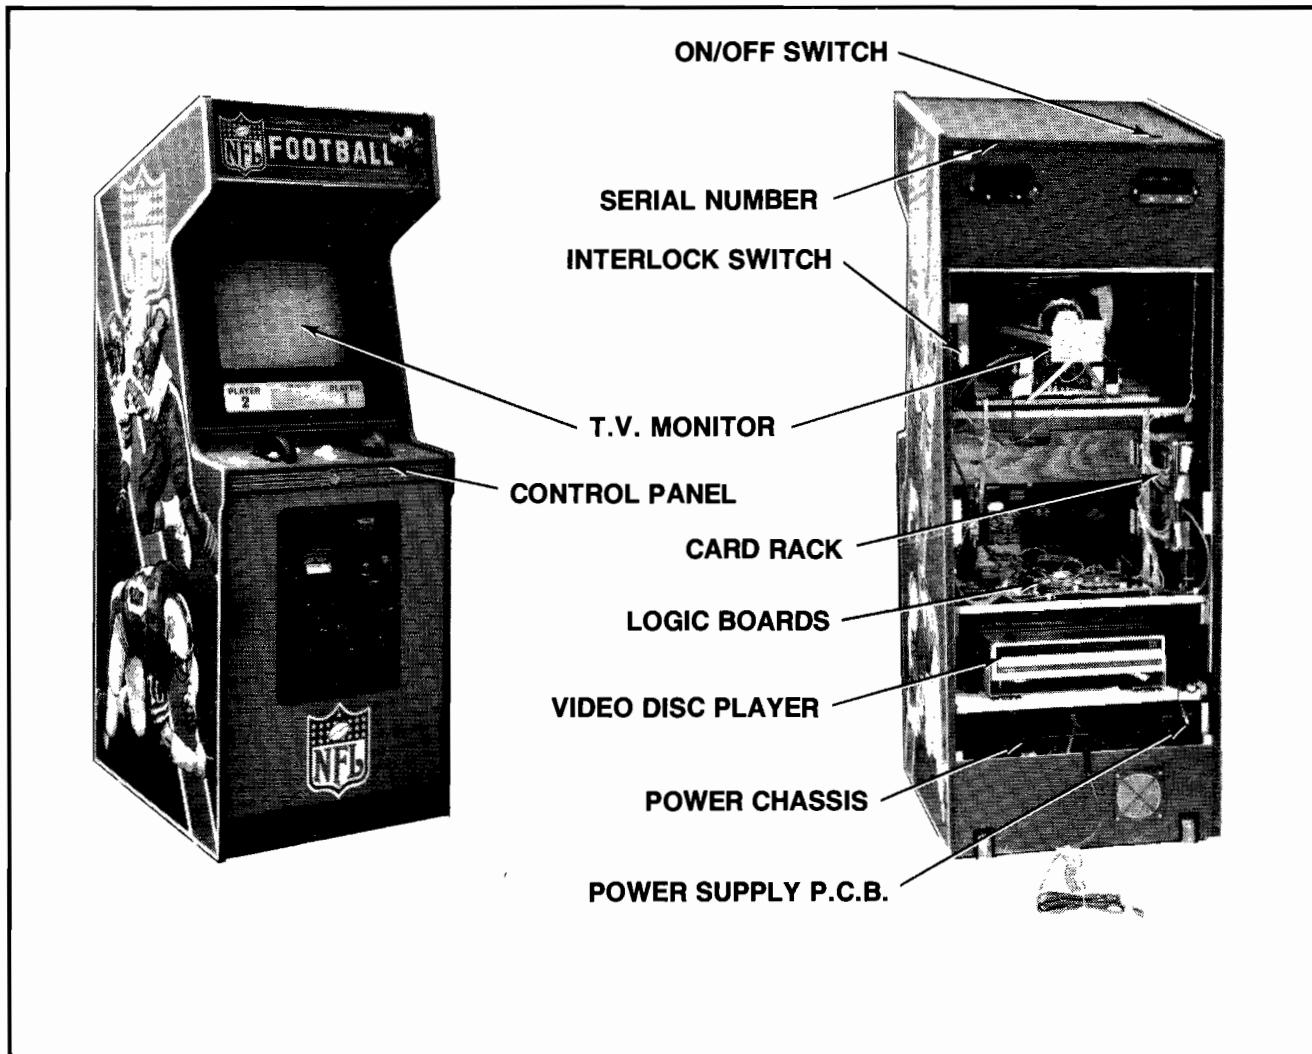

Figure 1-2 Location of Serial No., Interlock Switch, & Major Sub-Assemblies

INSTALLATION:

1. Location Requirements:

- Power:
Domestic 110 V at 60 Hz
- Temperature: 32° to 100°F (0° to 38°C)
- Humidity: Not over 95% relative
- Space required:
Upright 25" x 34" (63 x 86cm)
- Game height: Upright 74" (188cm) APPROX.

2. Voltage Selection:

Your game is designed to work properly on the line voltage where you are located. Check your line voltage with a meter to determine what its value is. Then check the power input wires to the main power supply transformer on your game to be sure they are connected to taps which correspond to your line voltage value.

If the power input wires to the main power supply transformer are not connected to taps which correspond to your local line voltage, move them to the proper taps.

If the line voltage in your area falls outside the upper or lower limits of the range of inputs covered by the main power supply transformer, **DO NOT PLUG YOUR GAME IN** until you have talked with your distributor and/or service man and obtained a solution to this problem. Otherwise you could damage your game.

3. Interlock and power ON/OFF switches. See Figure 1-2.

- To help prevent the possibility of getting an electric shock while working inside the game cabinet, interlock switches have been installed at each cabinet access door (this DOES NOT include the coin door on Upright models).
- When any access door is opened, the interlock switch installed there turns off all power to the game.
- Check each interlock switch for proper operation.

After checking the line voltage in your area and determining that the input wires to the main power supply transformer of your game are connected properly - or - after obtaining a solution to your over or under voltage problem from your distributor and/or your service man, plug the game into your A.C. wall outlet.

The game ON/OFF switch is located as shown in Figure 1-2. Turn the game on and allow it to warm up a few minutes.

Slowly open each access door to the game (this does not include the coin door on Upright models).

As the door is opened approximately 1" (2.54cm) the power to the game should go off (the T.V. monitor, all the lights, and all sounds will stop).

If this does not happen, check the interlock switch by this door to see if it has broken loose from its mounting or if it is stuck in the "ON" position.

If the switch is found to be bad, turn the game off, unplug it, and replace the interlock switch.

When done, plug the game back into the wall outlet, close the access door, and turn the game back on.

After the game has warmed up, repeat the above interlock switch test.

When the interlock switch is working properly and turns the power to the game off, power may be restored to the game with the access door(s) open. Take hold of the interlock switch plunger and **gently** pull it out to its fully extended position. **THIS IS TO BE USED ONLY FOR SERVICING THE GAME.** See Figure 1-3.

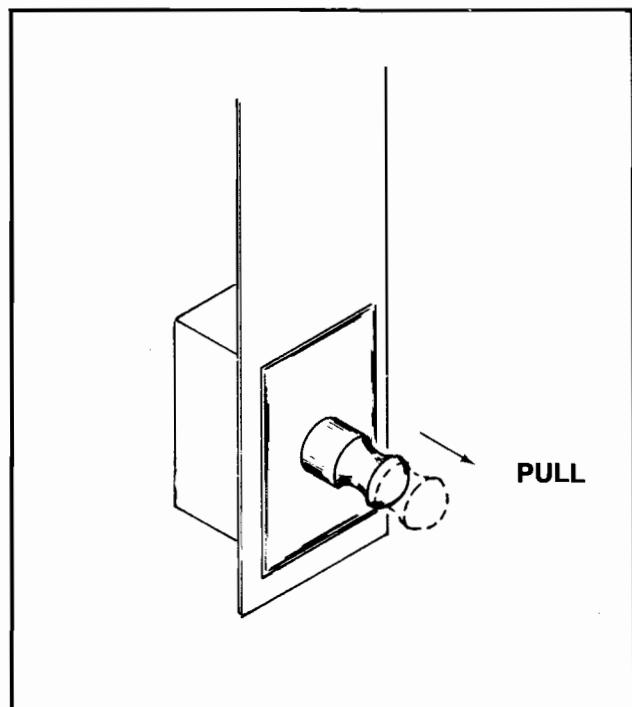

Figure 1-3 Interlock Switch Operation

4. Video Disc.

The video disc provided with your game is recorded on BOTH sides. In the event one side should become damaged, it may be flipped over to play the other undamaged side.

Should it be determined at any time that your game will be out of service for an extended period, we **STRONGLY RECOMMEND** that the video disc be removed from the player, inserted in its jacket, and stored in a vertical position to help prevent warping.

GAME VOLUME ADJUSTMENT CONTROL. See Figure 1-4.

The game volume control pots are located on a bracket just inside the door. There are 2 pots, one for game sounds volume and one for music volume. For adjustment, they may be reached through the coin door.

To make the sounds louder, turn the pots clockwise as you face them (→).

To make the sounds **less** loud, turn the pots counterclockwise as you face them (←).

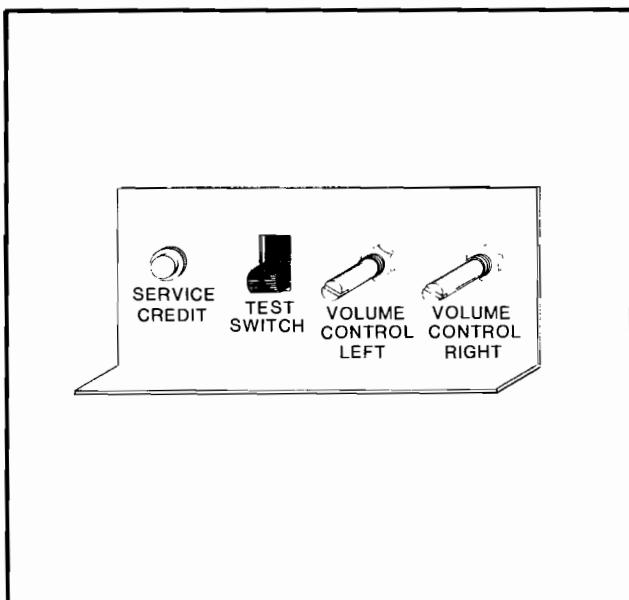

Figure 1-4 Game Volume Adjustment Controls

III GAME OPERATION

ATTRACT MODE

1. The Attract mode starts:
 - Just after power has been turned on to the game. (Self-Test switch is in the "OFF" position.)
 - After a Self-Test has been completed and there are no more credits left in the games memory.
 - No matter where the game is in the Attract mode sequence, it will immediately go to the Ready-To-Play mode display as soon as a game has been paid for.

PLAY MODE

1. The Play mode begins when the "GAME START" push button is pressed.
2. The Play mode ends when all of your PLAYERS have been eliminated. When this happens, "GAME OVER" is written across the monitor screen.
3. After completion of game play, the game will either go to the Attract mode (if there are no more credits left in its memory) or into the Ready-To-Play mode (if there are still credits left in its memory).

READY-TO-PLAY MODE

1. The Ready-To-Play mode starts when enough money has been accepted for a game.
2. The Ready-To-Play mode ends when the "GAME START" push button is pressed.

III MAINTENANCE AND REPAIR

Your **NEW** game needs certain types of maintenance to keep it in good working order. **CLEAN**, well **MAINTAINED** games **attract players** and **EARN MORE PROFITS**.

CLEANING

The most important thing you should remember is to clean the outside of the game and money acceptor mechanism(s) on a regular basis.

The outside of the game cabinet plus the metal can be cleaned with any non-abrasive household cleaner. However, the front of the T.V. monitor tube and **both sides** of all other glass and plastic on or in the game **MUST** be cleaned with anti-static cleaner **ONLY**. For cleaning the coin acceptor(s); hot soapy water may be used on the plastic ones and any household cleanser may be used on the metal ones. If you wish, special coin machine cleaners that leave no residue may be purchased from your distributor. For cleaning the bill acceptor mechanism, refer to its instruction manual (provided with your game under separate cover).

DO NOT dry-wipe any of the plastic panels. This is because any dust that was on them can scratch their surfaces. If this has happened, anyone looking through this type of damaged plastic would feel he was looking at the game through a fog. This fogging damage **CAN NOT** be repaired or reversed. The **ONLY** solution is to **replace** the damaged piece of plastic.

FUSE REPLACEMENT

This game contains several fuses located as shown in Figure 3-1.

1. UPRIGHT MODEL:

As viewed from the back, facing the cabinet, with the rear access door(s) removed; the fuses are located on the Power Chassis.

2. Replace fuses **ONLY** with the type and size listed in the Illustrated Parts Breakdown Section of your manual.

See the T.V. Monitor Manual (available on request from your distributor or the monitor manufacturer) and/or the T.V. Troubleshooting Section of your manual for information on these fuses.

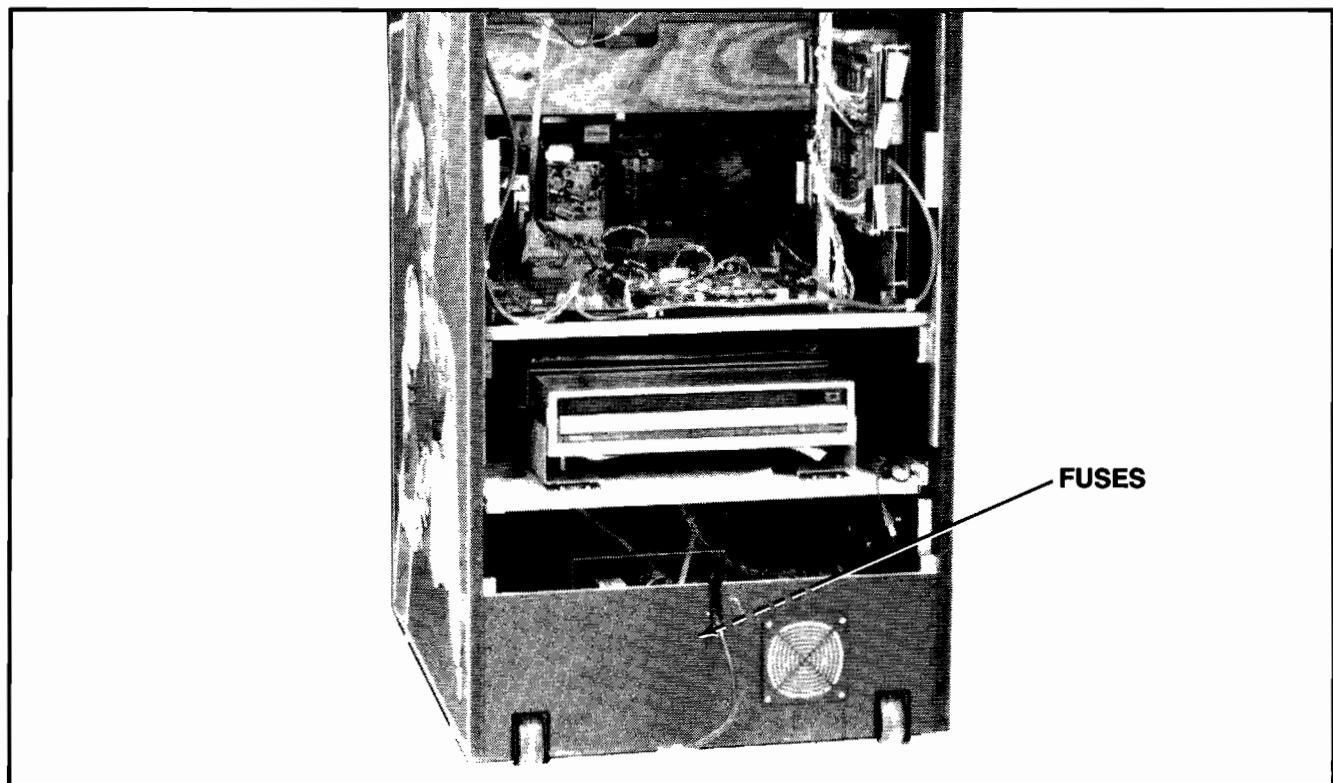

Figure 3-1 Location of Fuses

OPENING THE CONTROL PANEL

1. UPRIGHT MODEL: SEE FIGURE 3-2.

- The control panel is held in place by a nylon retaining strap and three latches, one on the left side, one on the right side, and one in the center of the rear of the cabinet.

They are spring loaded to provide constant positive pressure on their latch plates.

They can be reached through the coin door **AFTER turning power to the game off.**

To release the latches, lift up and toward the front center of the control panel.

Once they are released, unhook them from their latch plates.

- To remove the control panel:

Raise it up and tilt it toward you until you can see the cable and nylon retaining strap behind it.

Cradling the control panel between yourself and the cabinet, disconnect it from its cabling and nylon retaining strap.

The control panel is now free and can be removed.

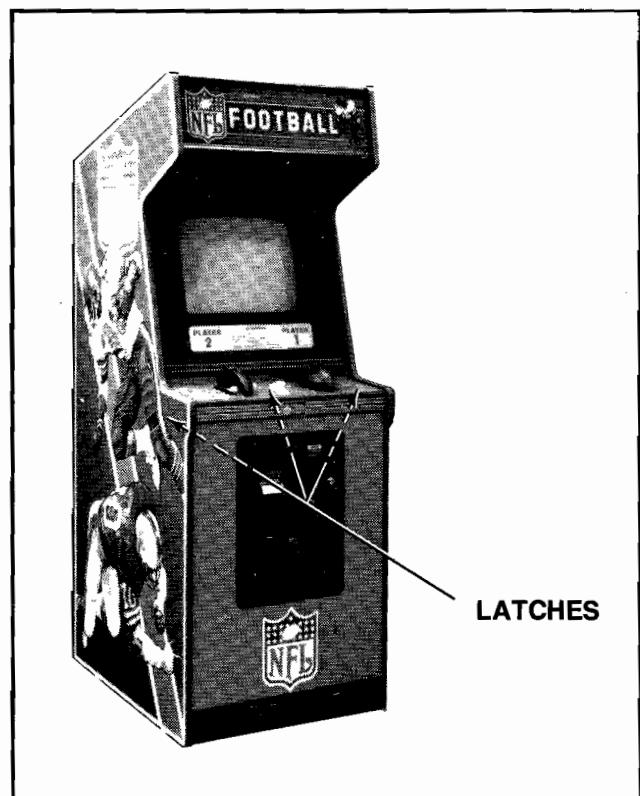

Figure 3-2 Opening the Control Panel

- To re-install the control panel, reverse this procedure.

REMOVAL OF THE MAIN-DISPLAY-GLASS AND/OR THE DIFFUSER AND/OR THE T.V. BEZEL:

1. UPRIGHT MODEL:

NOTE: In order to do this, the control panel **MUST** be removed first. See the "Upright Model" procedure.

- Turn the power to the game off and remove the control panel.
- By putting your finger in the hole in the middle of the main-display-glass/diffuser support, you can lift them **BOTH** up slightly and pull them toward you about an inch. Now let them down just far enough so you can get hold of their top edges with your other hand and lift them **BOTH** out of the game. See Figure 3-3.
- To remove the T.V. bezel, loosen and remove the screws that secure it in place. The T.V. bezel is now free and can be lifted out of the game cabinet.
- To reinstall the above removed items, reverse this procedure.

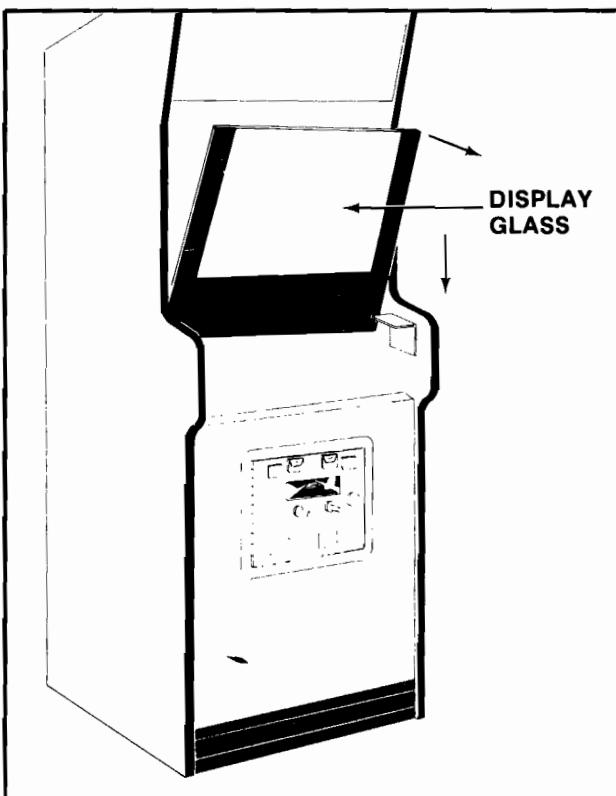

Figure 3-3 Removing the Main-Display-Glass & T.V. Bezel

T.V. MONITOR REPLACEMENT:

WARNING: High voltages may exist in any television unit, even with the power disconnected. Use EXTREME CAUTION and do not touch electrical parts or the T.V. yoke area with your hands or with metal objects held in your hands!

In addition, BE SURE TO USE HEAVY GLOVES when handling the monitor. You could cut your hands on the metal T.V. chassis without such protection.

DANGER: The T.V. monitor DOES NOT contain an isolation transformer on its chassis (it is mounted instead on the floor of the cabinet). When servicing the monitor on a test bench, YOU MUST ISOLATE THE MONITOR FROM A C VOLTAGE WITH AN ISOLATION TRANSFORMER.

1. Upright Model. See Figure 3-4.

- Turn power off to the game.
- Open the rear access door.
- Completely disconnect the T.V. monitor from all its cabling. DON'T FORGET THE CHASSIS GROUND WIRE.
- Before removing the T.V. monitor, the main display-glass and T.V. bezel must be removed. See above "Upright Model" procedure.
- With the removal of only four bolts, the T.V. monitor will be loose.
- The monitor chassis rests on top of a monitor mounting shelf inside the cabinet. The moni-

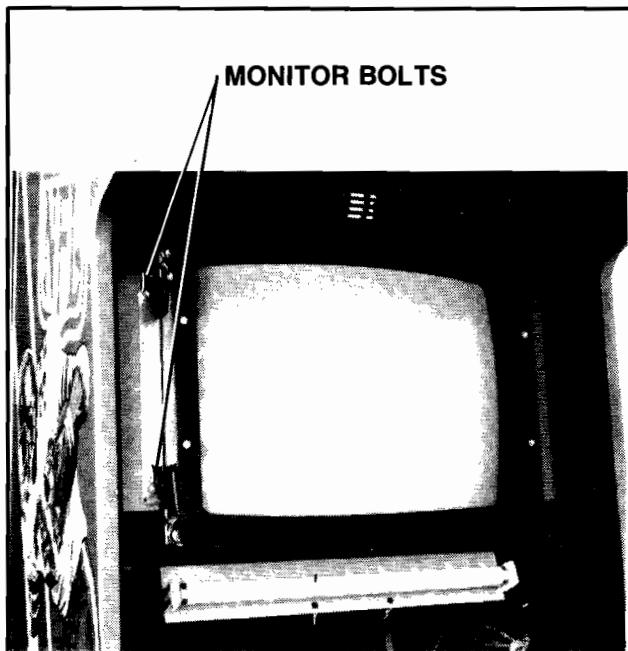

Figure 3-4 Removing the Monitor

tor is removed by sliding it out the front of the cabinet. See Figure 3-4.

- To reinstall the T.V. monitor, reverse this procedure.

PRINTED CIRCUIT BOARD (P.C.B.) REPLACEMENT:

1. UPRIGHT MODEL. See Figure 3-5.

- Turn the power to the game off.
- Unlock and open the rear access door(s).
- Disconnect all cabling from the P.C. board(s) you wish to remove.
- Remove the small P.C.B. clamping devices and slide the P.C.B.(s) from their mountings.
- To separate the large P.C.B. assembly, remove the screws which secure the P.C.B.'s to their support posts and fold them over to the side.
- To reinstall the above P.C.B.(s), reverse this procedure.

NOTE: P.C.B.'s are all keyed and will ONLY fit into their connectors one way without forcing them. The plugs on the cable harness which connect it to the P.C.B.'s are also keyed and will ONLY go onto their connectors one way without forcing them.

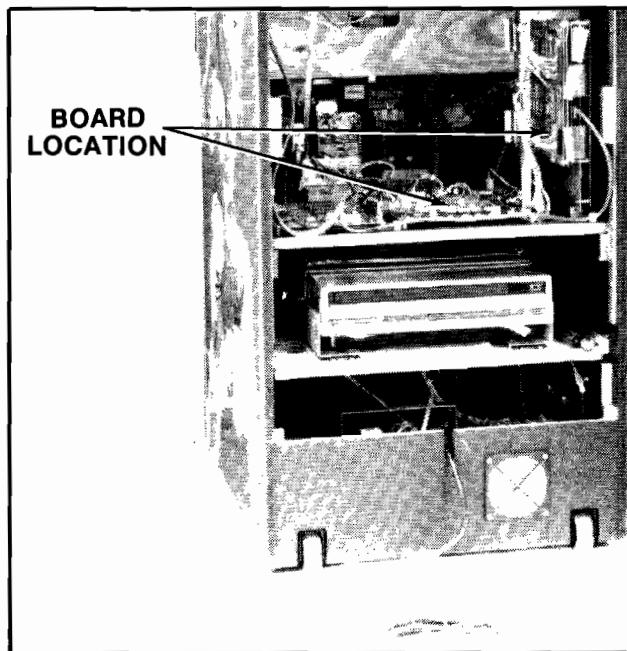

Figure 3-5 Removing the P.C.B.'

OPENING THE ATTRACTION PANEL:

1. UPRIGHT MODEL:

Turn the power to the game off.

Opening the attraction panel:

Remove the screws which secure the top bracket in place. (They are on its top side.) See Figure 3-6.

Remove the top bracket and slide up the attraction panel. This exposes the speakers, and the fluorescent tube assembly.

To reinstall the attraction panel, reverse this procedure.

The fluorescent light tube may be replaced at this time. BE CAREFUL NOT TO DROP IT.

WARNING: If you drop a fluorescent tube and it breaks, IT WILL IMPLODE! Shattered glass can fly six (6) feet or more from the implosion. Use care when replacing any fluorescent tube.

Replacing the fluorescent light tube starter. See Figure 3-7.

Be sure the power to the game has been turned off.

Grasp the starter (it is on the back of the mounting bracket), give it a quarter turn, and remove it from its socket.

To replace the fluorescent light tube starter, reverse this procedure.

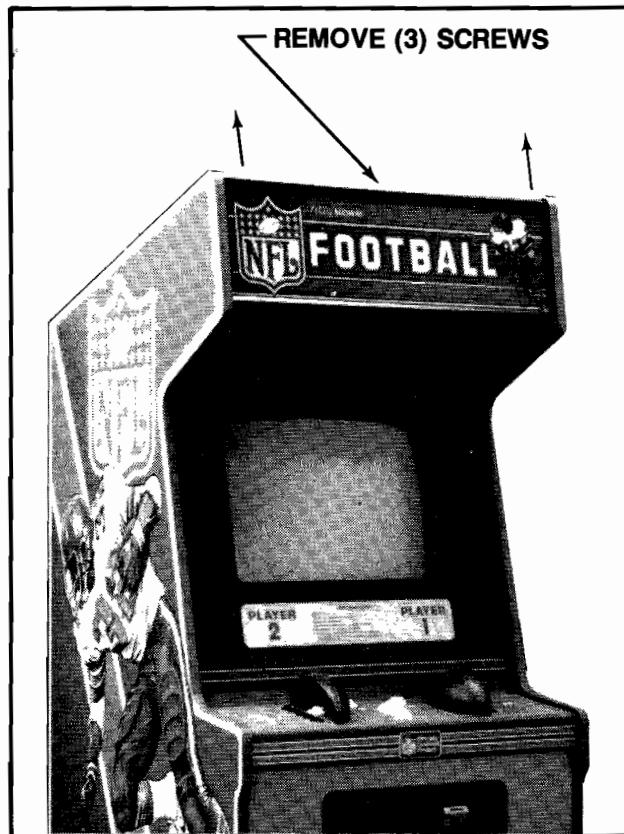

Figure 3-6 Opening the Attraction Panel

Replacement of the fluorescent tube mounting bracket assembly. See Figure 3-8.

Disconnect it from its power cable.

Remove the screws which secure it in place and remove it from the cabinet.

To reinstall the fluorescent tube mounting bracket assembly, reverse this procedure.

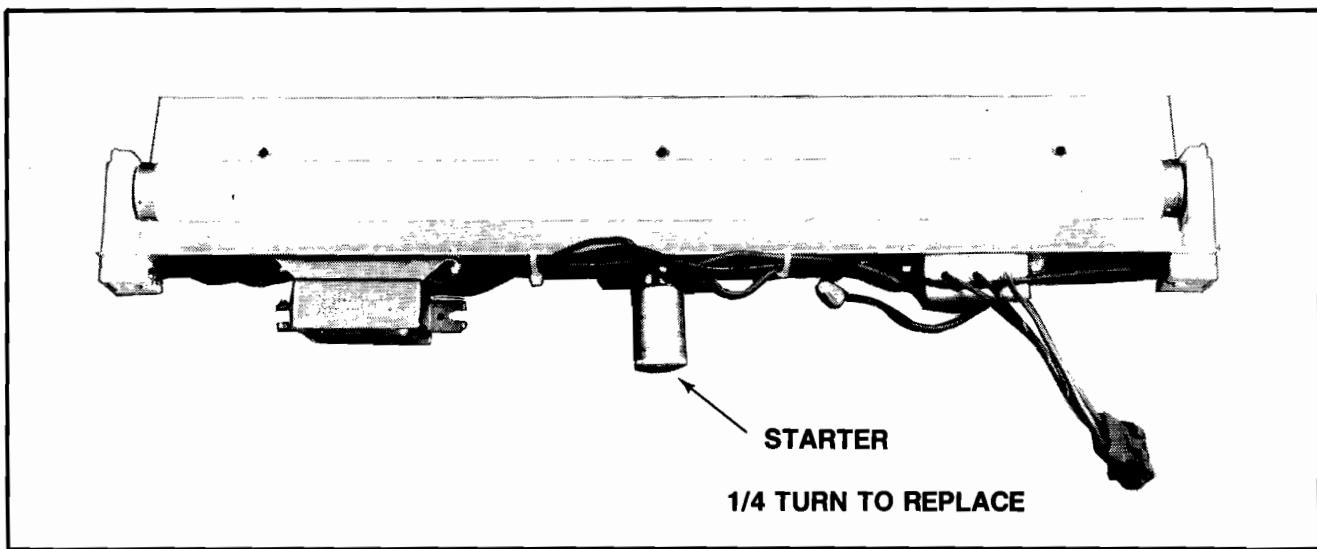

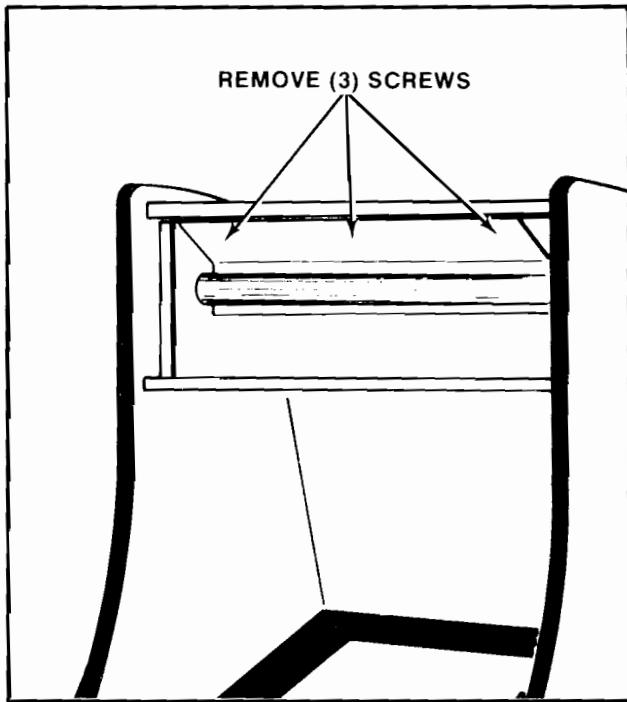

Figure 3-7 Replacing Fluorescent Tube Starter

**Figure 3-8 Replacing Fluorescent Tube
Mounting Bracket & Speakers**

Removing the speaker(s):

The attraction panel **MUST** be removed first. This will enable you to reach all the necessary areas where cables **MUST** be disconnected.

Disconnect the speaker(s) from all its cabling. There is one plug at a point near each speaker.

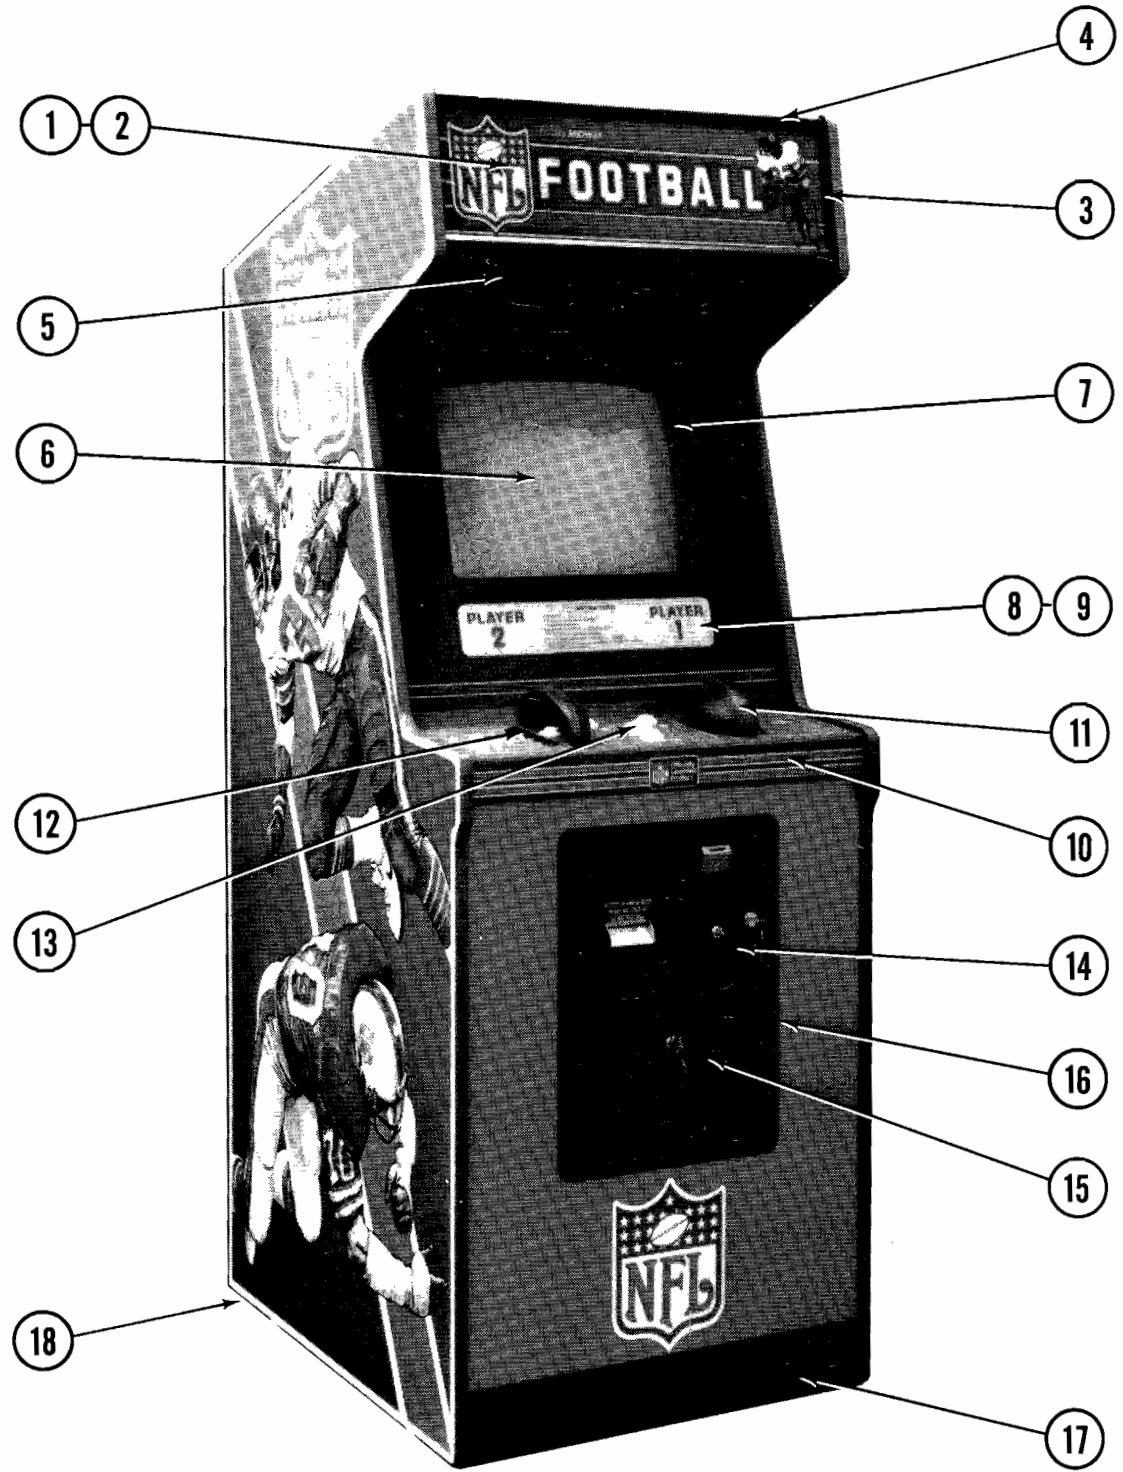

Remove the hardware which secures the speaker(s) to the cabinet and set it aside.

The speaker(s) are now free and can be slid out through the hole in the front of the game where the attraction panel was mounted.

To reinstall the speaker(s), reverse this procedure.
